# SYSTEM SUMMARY

## SETUP

| No | Component | Feature | Details |
|---|---|---|---|
| 1 | WMS Server | Server (Web service and API) | This is the core of the operation. Item Tracking and Inventory data are saved and acquired. |
| 2 | Mobile WMS App | Android Application | Mobile scanner that could perform data collection or verification via RFID scanning. It connects to the server via API to send/receive data. |
| 3 | Printer | Label printer and RFID data encoder | Prints labels and encode RFID data used for item identification. The WMS generates the labels to be printed. |
| 4 | Computers/ Clients | Dashboard | This can be PC, tablet or even a mobile phone used to operate the Warehouse Management System. |

## OPERATION

**Install**

Please refer to the installation guide document for the installation procedure. This process includes WMS System server installation, WMS Mobile application installation, admin user provisioning and setting up secure server and operation environment.

**Setup**

This phase is the provisioning of settings for the WMS to be operational. From setting up the organization information to asset information.

.

**Operate**

Once WMS system is installed and setup it can now be used by the users. This operation is the whole life cycle of the assets.

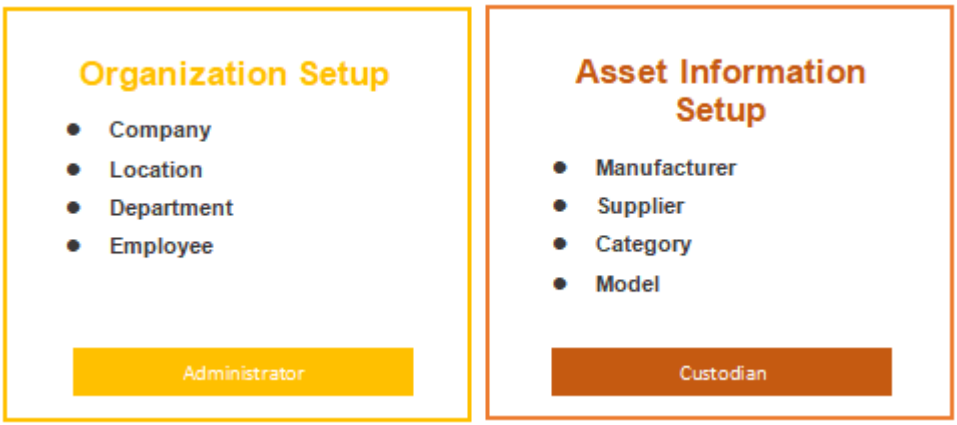

**Maintain**

These are operation to make sure that the WMS system setup is fail proof and secure.

# INSTALL

Please refer to the installation guide to install the needed components of WMS. The guide is only available to administrator of the system.

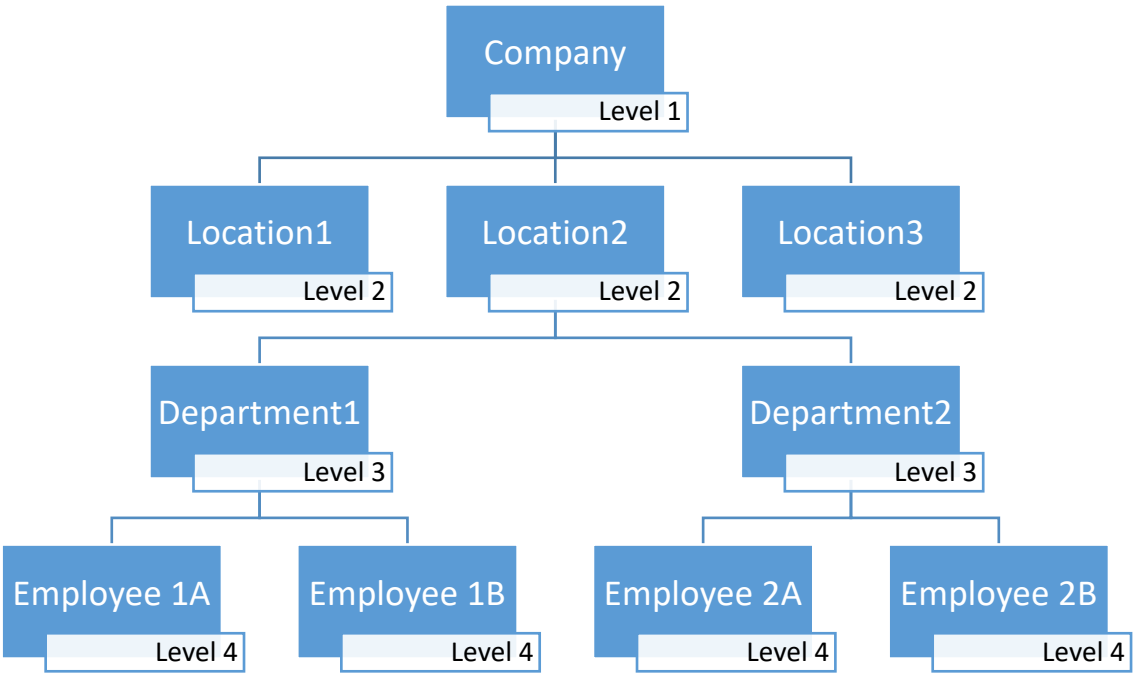

# CONFIGURATION

Company, location, department and employee needs to be registered in the system. It can be registered by bulk through import operations.

Asset manufacturer, supplier, category and model needs to be setup to define the details information of an asset.

## ORGANIZATION SETUP

**Hierarchy of Organization**

This organization setup will configure the system to reflect the actual organization setup. There are 4 levels of entity defined, namely Company, Location, Department and Employee.

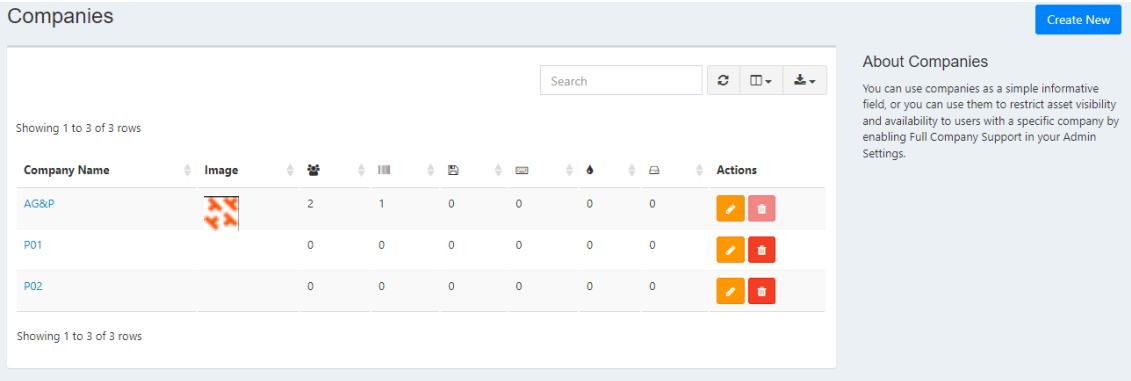

The Company is the name of the whole organization. However, the system can support multiple organizations. The Location is the geographical location of an entity in the organization.

**Company Setup**

The Company Setup will provision – list, create, view, update and delete the first level of organization. There should be at least one company in the organization. This operation can only be done by the Administrator.

Menu: Settings -> Companies

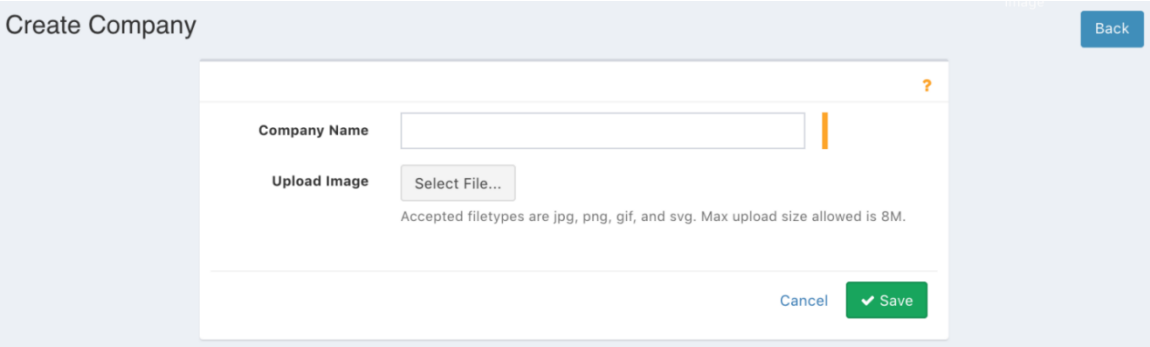

**A. List**

The list can be searched, refreshed, customize the column to be viewed and exported to different format (csv, excel, word, text, json, xml, pdf, tsv).

**B. Create**

**Action**: Click the “Create New” button

**Procedure:**

1.Input the Company Name

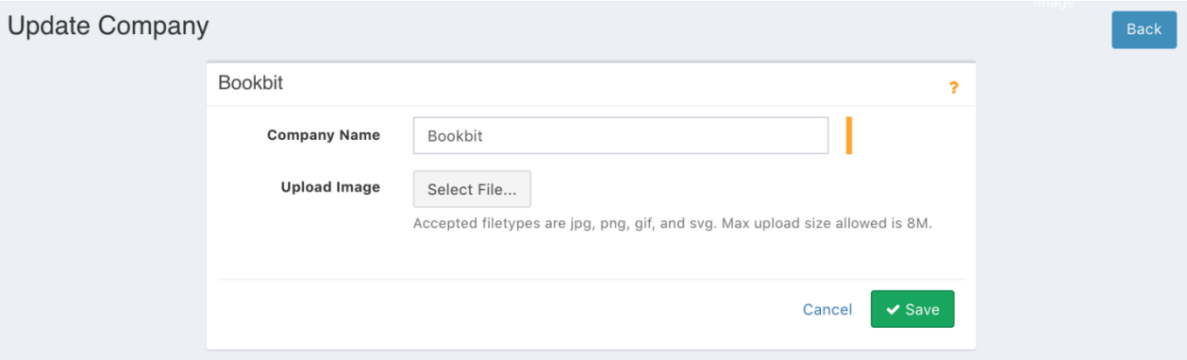

2.Select file of image of the logo of the company.

3.Click “Save” button.

**Result**: A new company is created and displayed in company list.

**C. View and Update**

**Action**: Click the “Edit” (orange) button at Action column

**Procedure:**

1.Edit the Company Name

2.Select file of image of the logo of the company to change the logo.

3.Click “Save” button.

**Result**: The company is updated and information is updated on company list.

**D. Delete**

**Action**: Click the “Delete” (red) button at Action column

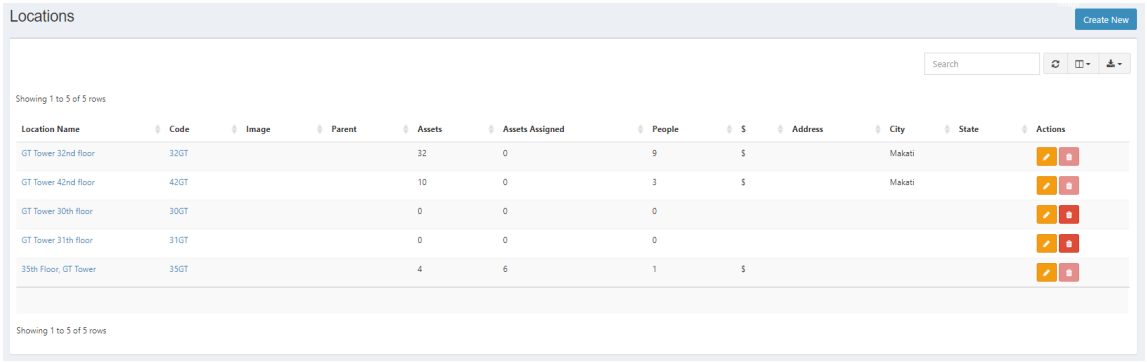

**Result**: The company is deleted and removed from the company list.

**Location Setup**

The Location Setup will provision – list, create, view, update, and delete the geographical location of an entity in the organization. There should be at least one location in the company. This operation can only be done by the Administrator.

Menu: Settings -> Locations

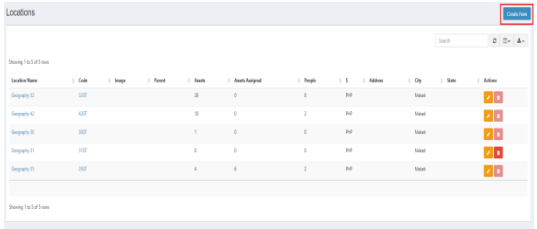

**A. List**

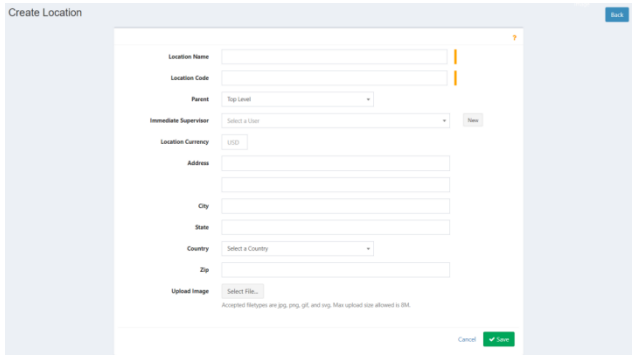

The list can be searched, refreshed, customized the column to be viewed and exported to different formats (csv, excel, word, text, json, xml, pdf, tsv).

**B. Create**

**Action**: Click the “Create New” button

**Procedure**:

1.Input the Location Name

2.Input the Location Code

3.Select Parent from the drop-down list

4.Select Immediate Supervisor from the drop-down list

5.Input the Address

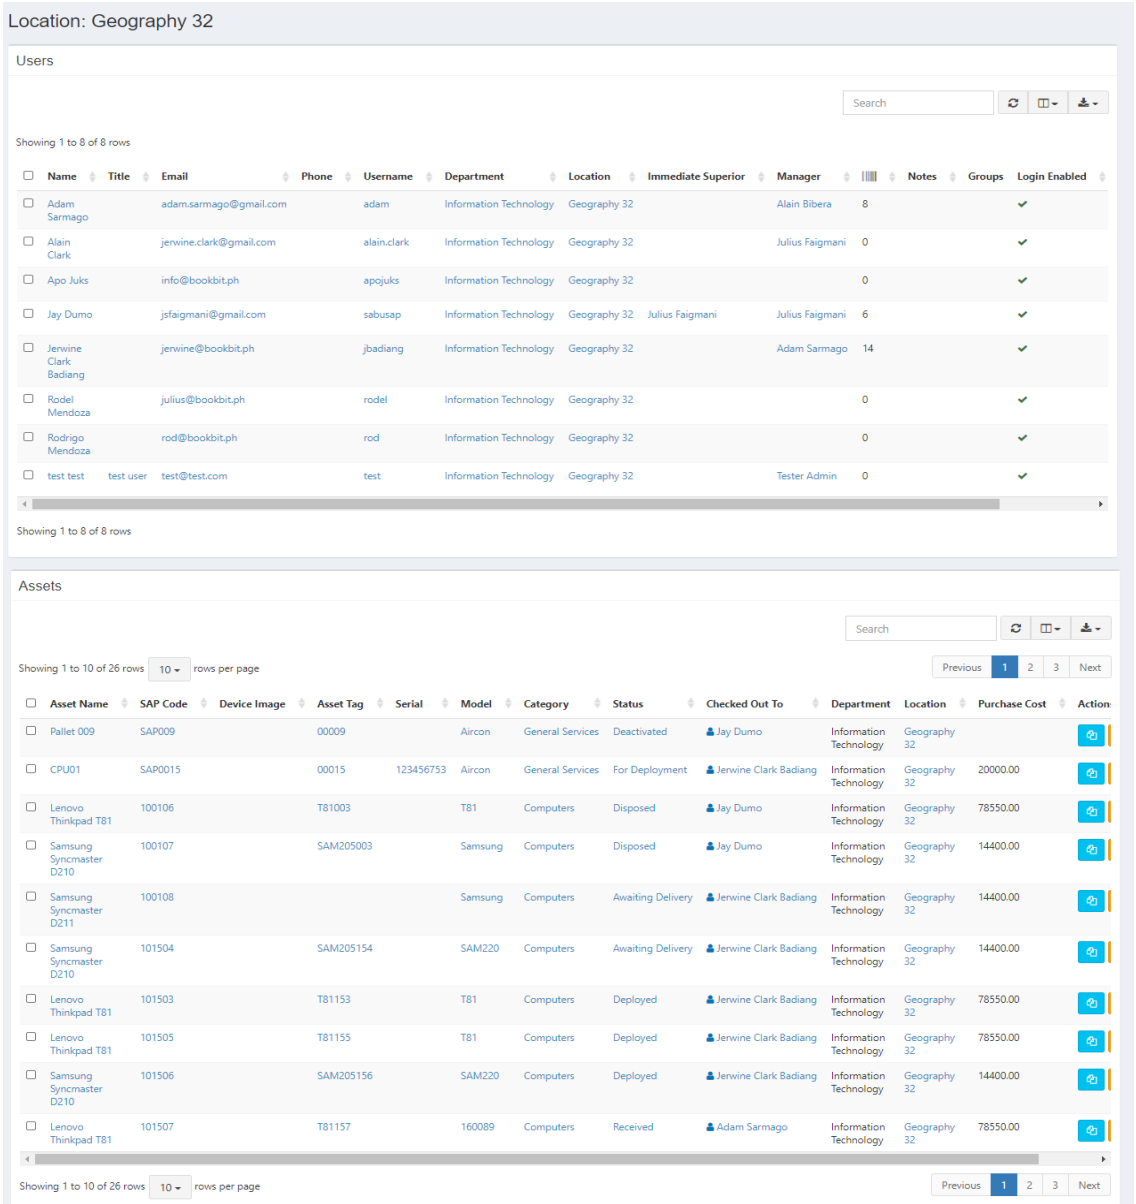

6.Select the file and upload the image

7.Click the “Save” button.

**Result**: A new location is created and displayed on the location list.

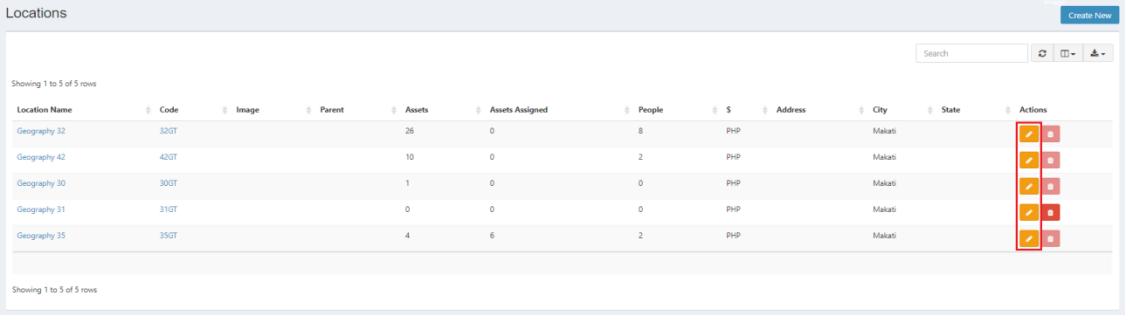

### C. View and Update

**Action**: Choose and click a Location at the Location column to view information.

All users and assets will be shown in that location.

**Action**: Click the “Edit” (orange) button at the Action column

**Procedure**:

1.Edit the information needed

2.Select the file to change the image

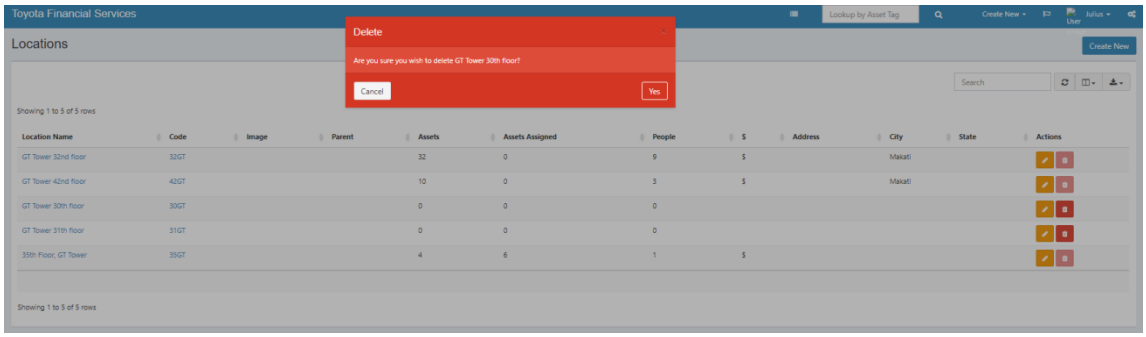

3.Click the “Save” button.

**Result**: The location is updated and information is updated on the location list.

**D. Delete**

**Action**: Click the “Delete” (red) button at the Action column.

**Note**: Deleting is only possible if there is no Entity.

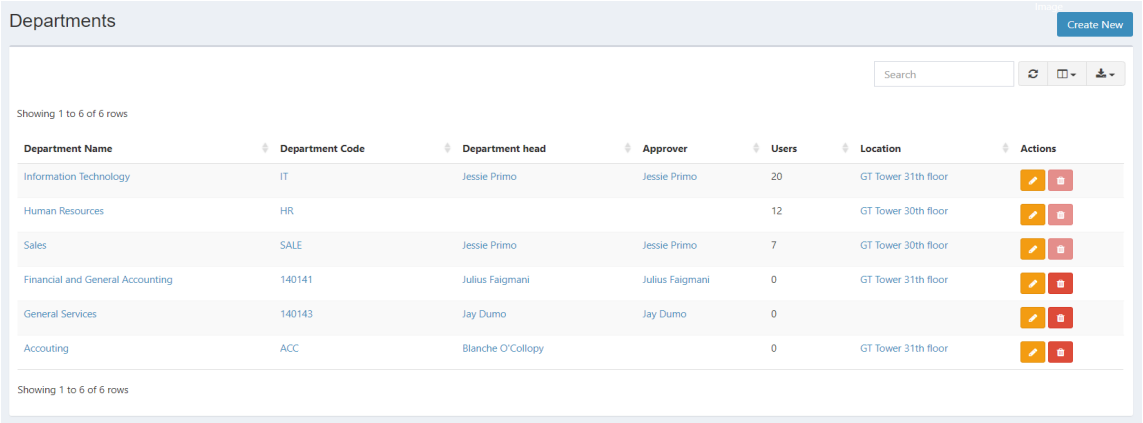

**Result**: The location is deleted and removed from the location list.

**Department Setup**

The Department Setup will provision – list, create, view, update, and delete the department of a company. There should be at least one department in the company. This operation can only be done by the Administrator.

Menu: Settings -> Departments

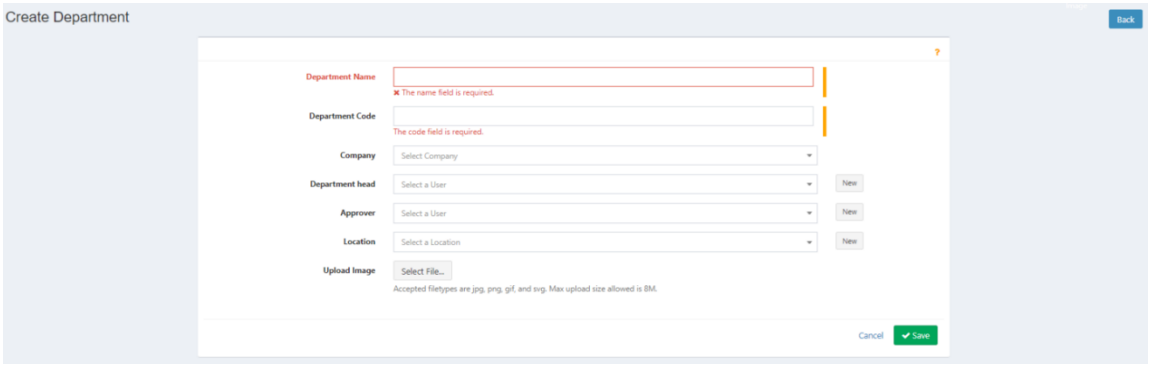

**A. List**

The list can be searched, refreshed, customized the column to be viewed and exported to different formats (csv, excel, word, text, json, xml, pdf, tsv).

**B. Create**

**Action**: Click the “Create New” button

**Note**: Highlighted fields are required to proceed.

**Procedure**:

1.Input the Department Name & Department Code

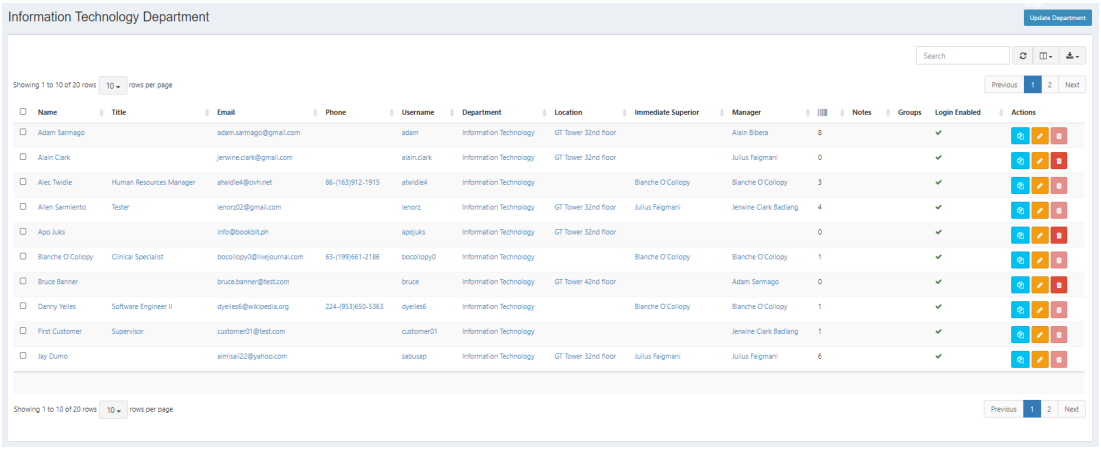

2.Select Company, Department, Approver, Location from the drop-down list

3.Select file and upload image

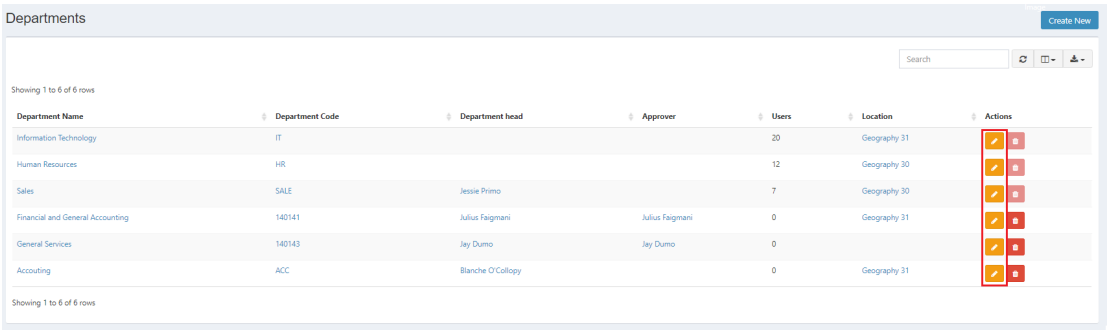

**Result**: A new department is created and displayed on the location list.

## C. View and Update

**Action**: Choose and click a department at the department column to view information of a specific department. All users assigned to that department will be shown.

**Action**: Click the “Edit” (orange) button at the Action column

**Procedure**:

1.Edit the information needed

2.Select the file to change the image

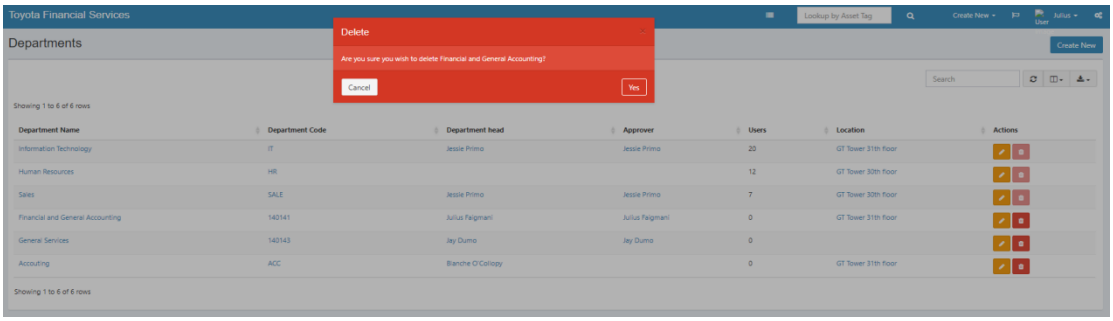

3.Click the “Save” button.

**Result**: The location is updated and information is updated on the location list.

**D. Delete**

**Action**: Click the “Delete” (red) button at the Action column

**Note**: Department can only be deleted if there is no user listed.

**Result**: The department is deleted and removed from the location list.

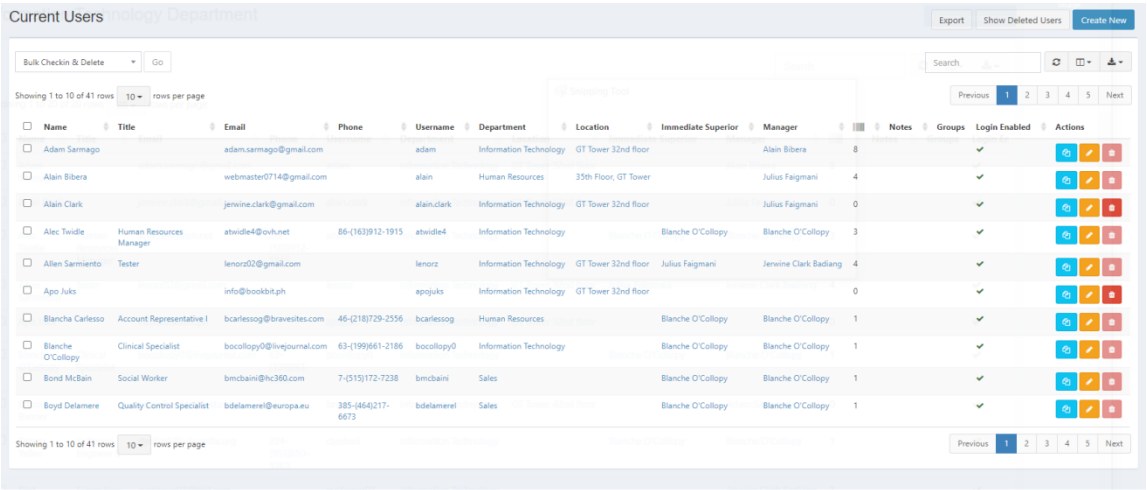

**Employee Setup**

The Employee Setup will provision – list, create, view, update, and delete the list of the employee in a company. There should be at least one employee in the company. This operation can only be done by the Administrator

Menu: People

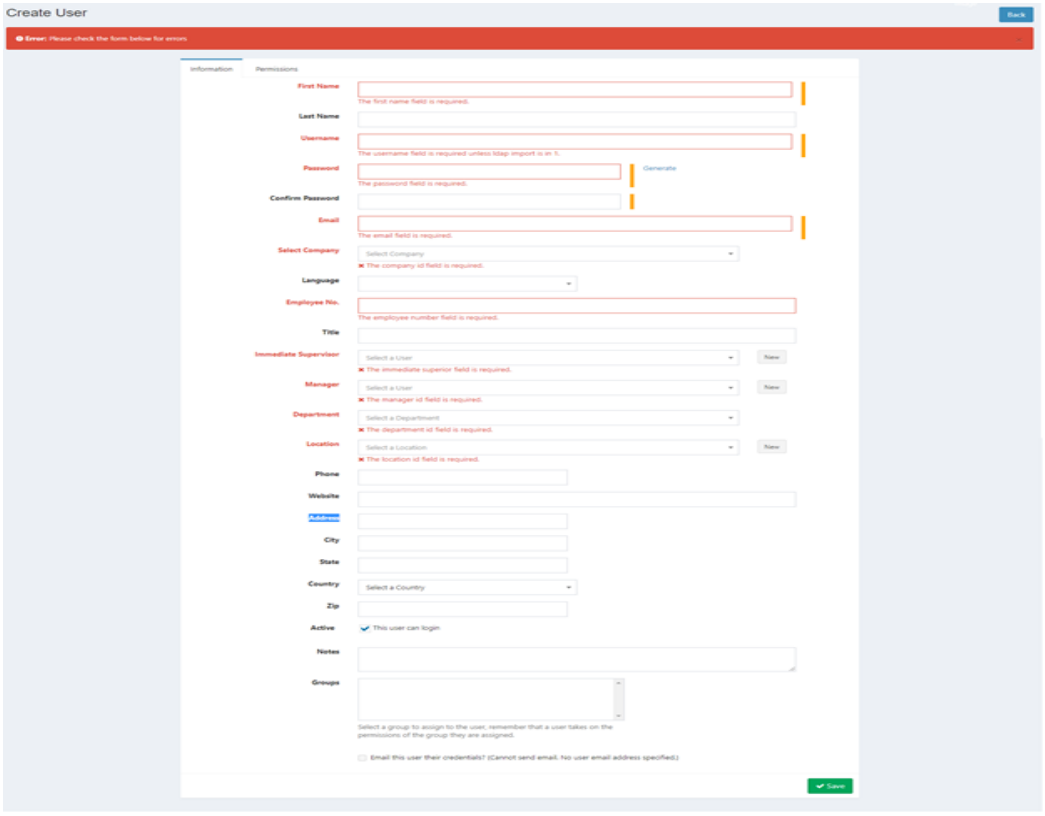

**A. List**

The list can be searched, refreshed, customized the column to be viewed and exported to different formats (csv, excel, word, text, json, xml, pdf, tsv).

**B. Create**

**Action**: Click the “Create New” button

**Note**: Highlighted in red is required fields.

**Procedure**:

1.Input First and Last Name

2.Input username, password and email

3.Select Company from the drop-down list

4.Select Language from the drop-down list

5.Input Employee Number and Employee Title

6.Select Immediate Supervisor from the drop-down list

7.Select Manager from the drop-down list

8.Select Department from the drop-down list

9.Select Location from the drop-down list

10.Input Phone Number, Website, and Address

11.Tick the Active check box if the user can log in

12.Input Notes

13.Go to the Permissions tab and select a group to assign to the user, remember that a user takes on the permissions of the group they are assigned

14.Tick the checkbox if you want to email the user their credentials. You can not send an email if no email address is specified

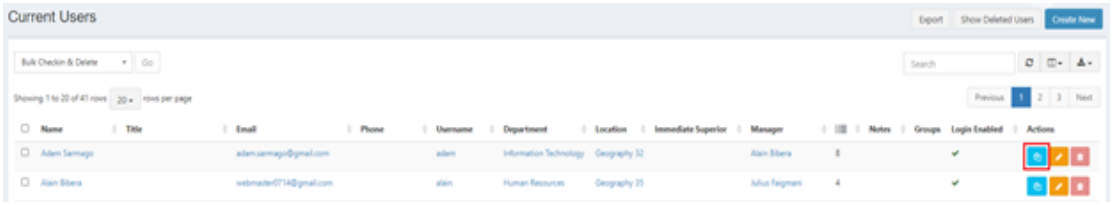

**Result**: A new department is created and displayed on the location list.

<u>You can also add or deny privileges of a user in permissions tab</u>

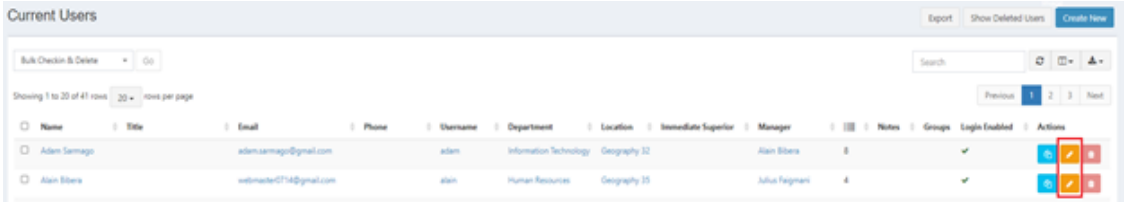

*(Configuration’s Organization Setup continuation…)*

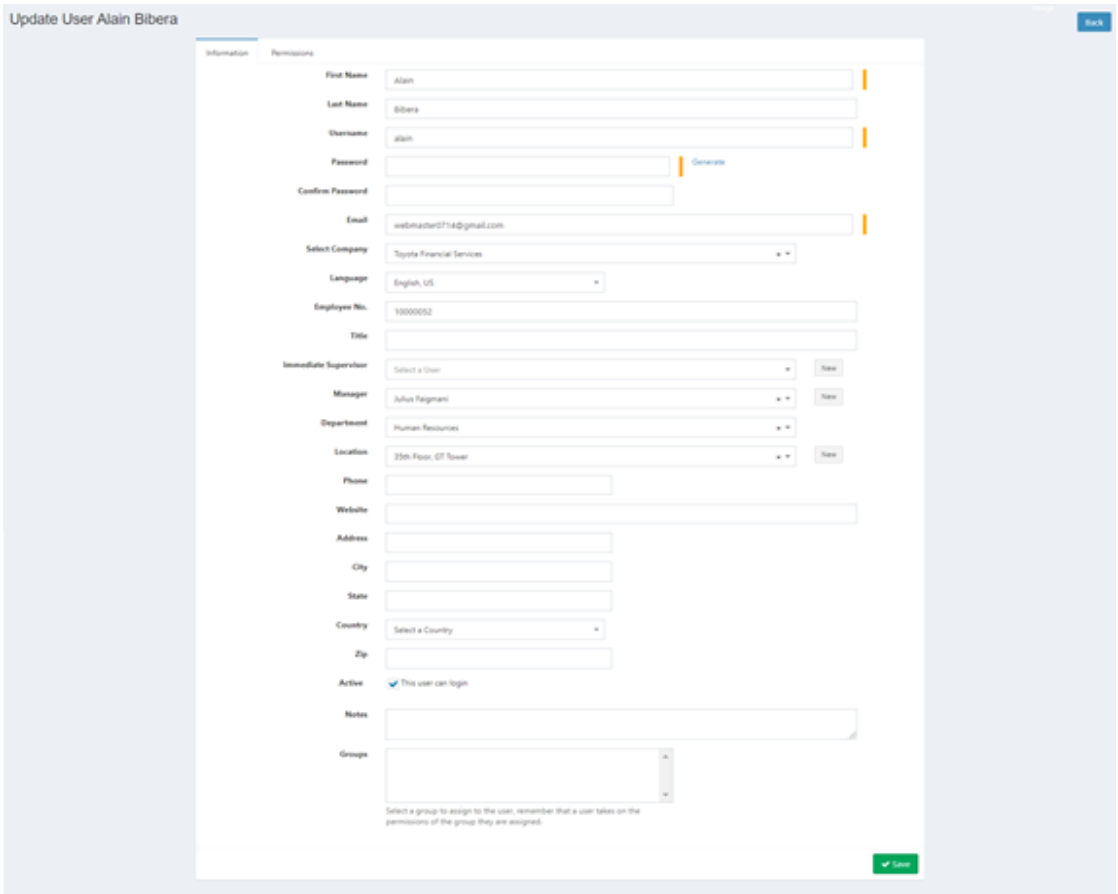

### C. Clone, View and Update

**Action**: Click the “Clone” (blue) button at the Action column if you want to make a copy or duplicate an employee

You can also edit the employee info by clicking the “Edit” (orange) button at the Action column.

**Procedure**:

1.Edit the information needed

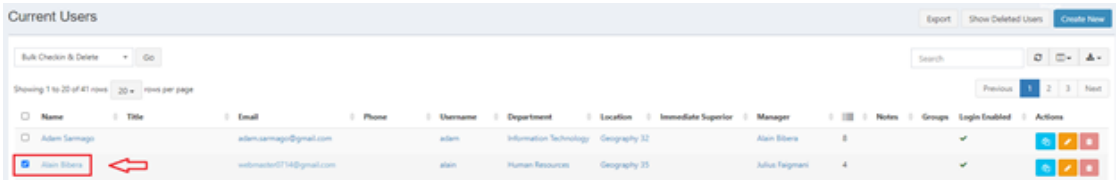

2.Select the file to change the image

3.Click the “Save” button.

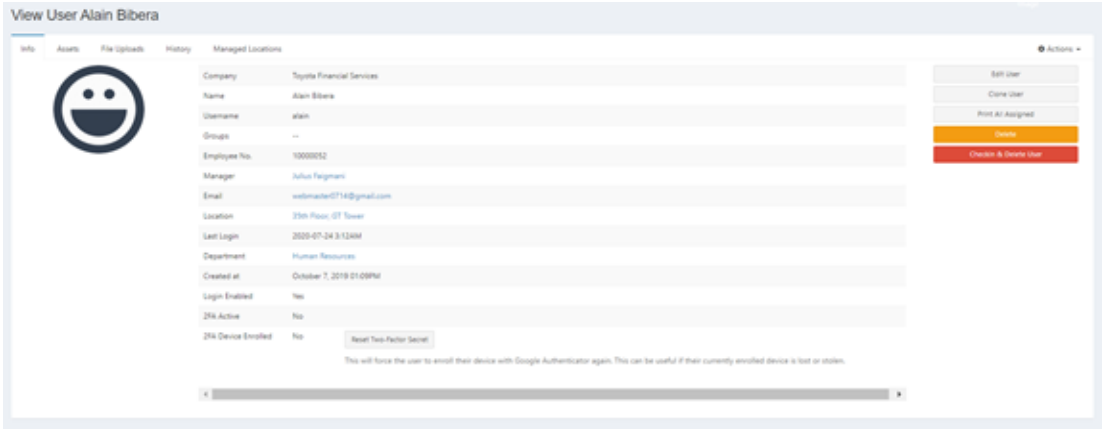

**Result**: The user information is updated on the users list.

*(Configuration’s Organization Setup continuation…)*

**Action**: Choose and click an Employee Name at the Name column to view information of the specific employee.

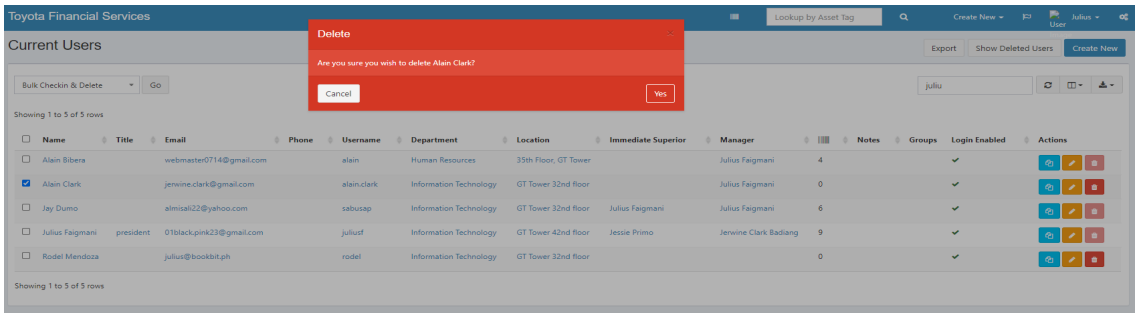

All the User information will be shown such as Assets and History Transactions.

**D. Delete**

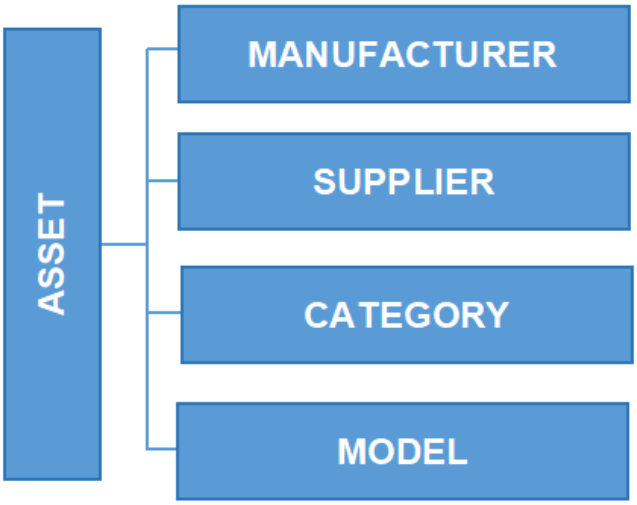

**Action**: Click the “Delete” (red) button at the Action column.

**Note** Deleting a user is not possible if there is an asset assigned. If you need to delete a user you need to remove or transfer the asset assigned to him/her.

**Result**: The employee is deleted and removed from the people list.

## ASSET INFORMATION SETUP

An asset has several information that are tied to the following entities, namely the Manufacturer, Supplier, Depreciation, Category and Model.

Each entity information is collected to get references on asset trends as well as purchase information.

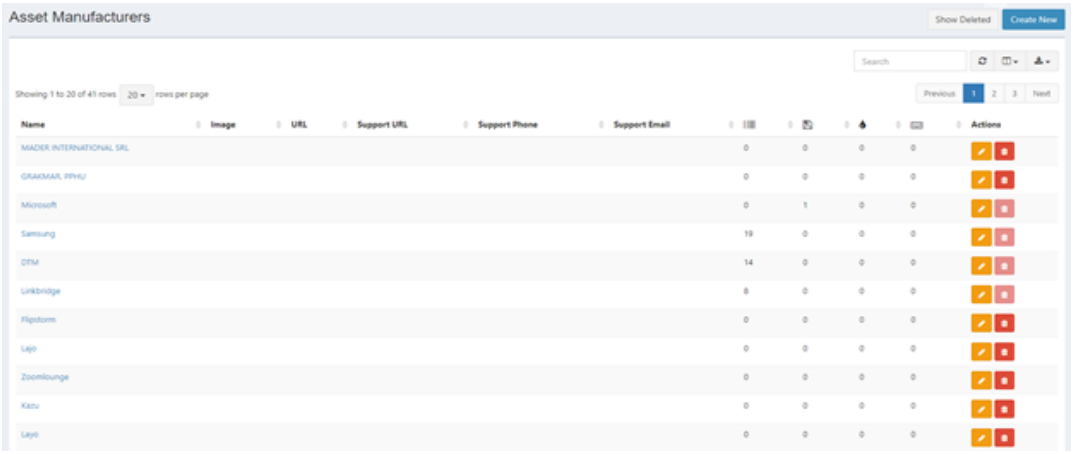

### Manufacturer Setup

The Manufacturer Setup will provision – list, create, view, update, and delete the list of the producer in the company. This operation can only be done by the Administrator

Menu: Settings -> Manufacturer

### A. List

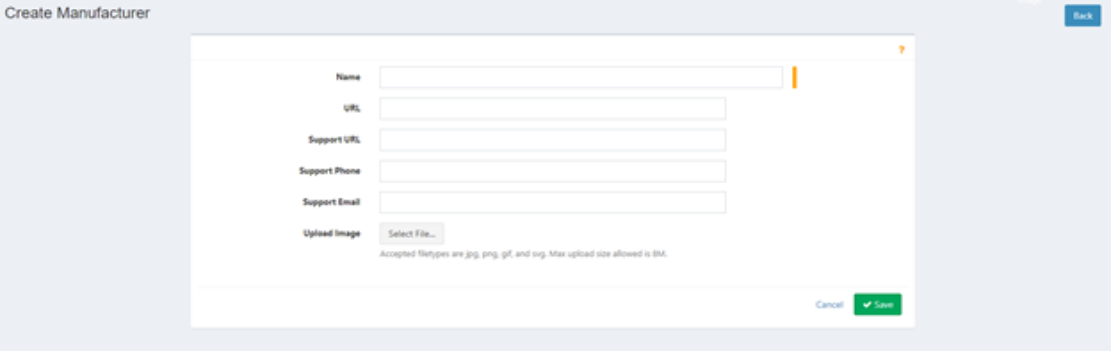

The list can be searched, refreshed, customized the column to be viewed and exported to different formats (csv, excel, word, text, json, xml, pdf, tsv).

*(Configuration's Asset Information Setup continuation…)*

**B. Create**

**Action**: Click the "Create New" button

**Procedure**:

1.Input the name of the manufacturer

2.Input the Manufacturer's URL

3.Input the Support URL (Example: https://support.google.com/)

4. Input the Support Phone Number of the Manufacturer

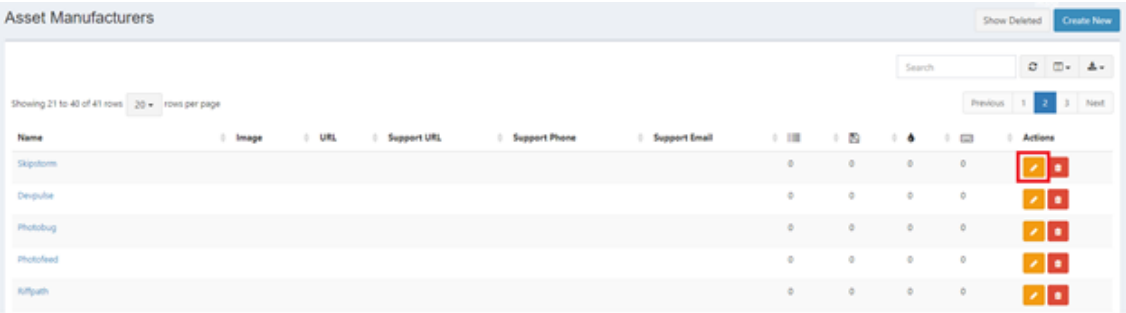

5. Input the Support Email Address.

6. Select the file and upload the logo or image of the Manufacturer.

**Result**: A new Manufacturer is created and displayed on the Manufacturer list.

**C. View and Update**

**Action**: Click the "Edit" (orange) button at the Action column

**Procedure**:

1.Edit the information needed.

2.Select the file and upload the image or logo of the Manufacturer.

(**Note**: Accepted file types are jpg, png, gif, and svg. Max upload size allowed is 8M.)

**D. Delete**

**Action**: Click the "Delete" (red) button at the Action column.

**Note**: Manufacturer can only be deleted if there is no user listed.

**Result**: The company is deleted and removed from the company list.

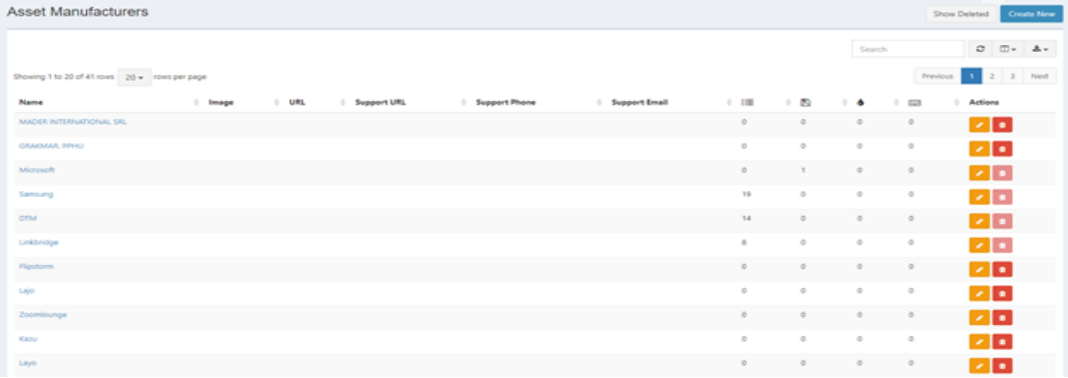

**Supplier Setup**

The Supplier Setup will provision – list, create, view, update, and delete the list of the Supplier in the company. This operation can only be done by the Administrator

Menu: Settings -> Supplier

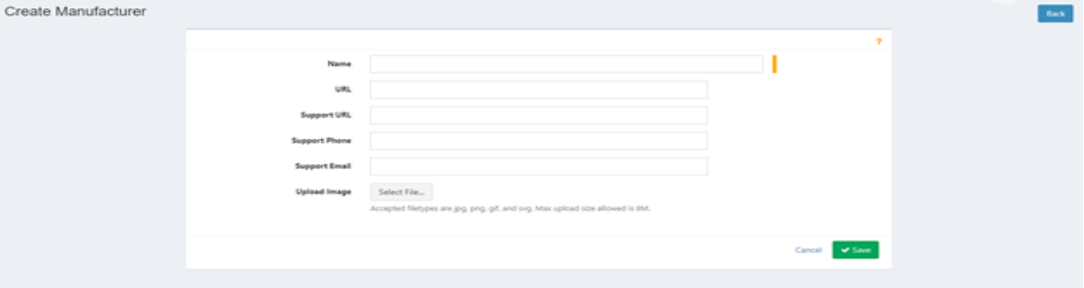

**A. List**

The list can be searched, refreshed, customized the column to be viewed and exported to different formats (csv, excel, word, text, json, xml, pdf, tsv).

**B. Create**

Action: Click the “Create New” button

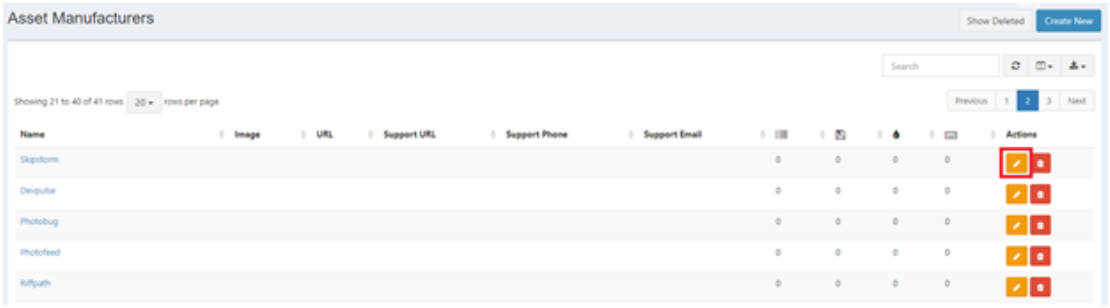

**Procedure**:

1. Input the name of the Supplier (Required)
2. Input the Address, City, and State
3. Select a Country
4. Input Zip Code
5. Input the Contact Person Name
6. Input Contact Information: Phone, Fax and Email Address.
7. Input the website URL of the Supplier (if any).
8. Input Notes
9. Select the file and upload the logo or image of the Supplier.
   (Accepted file types are jpg, png, gif and svg)

**Result**: A new Supplier is created and displayed on the Supplier list.

**C. View and Update**

Action: Click the “Edit” (orange) button at the Action column

**Procedure**:

1.Edit the information needed.

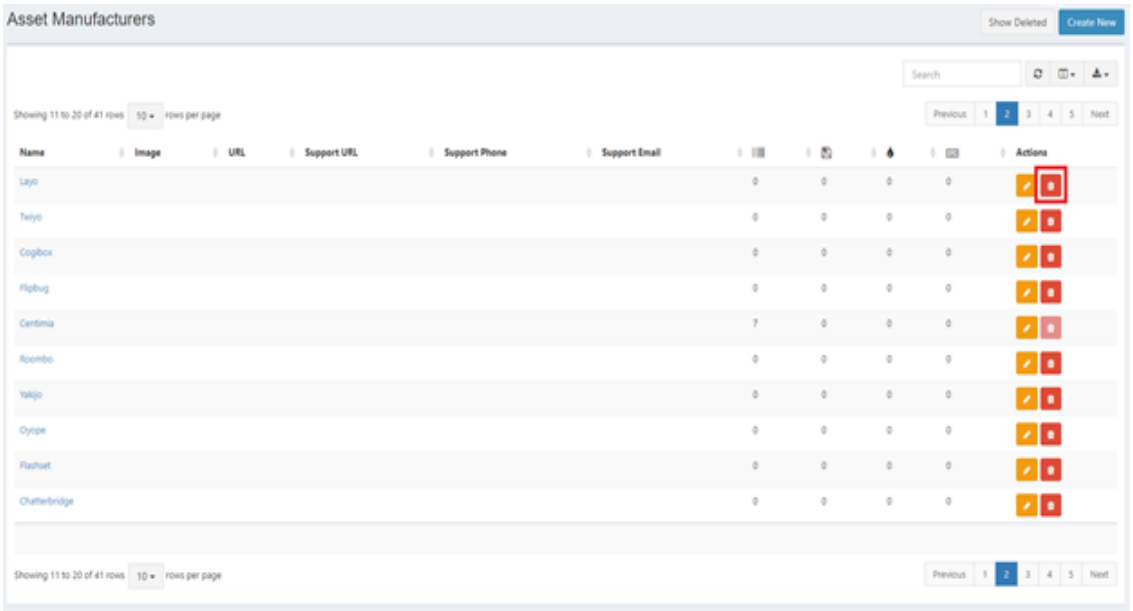

2.Click Select File to change the uploaded image or logo of the Supplier.

(Note: Accepted file types are jpg, png, gif, and svg. Max upload size allowed is 8M.)

**D. Delete**

Action: Click the “Delete” (red) button at the Action column.

Note: Deleting is only possible if no asset is listed.

**Result**: The Supplier is deleted and removed from the Suppliers list.

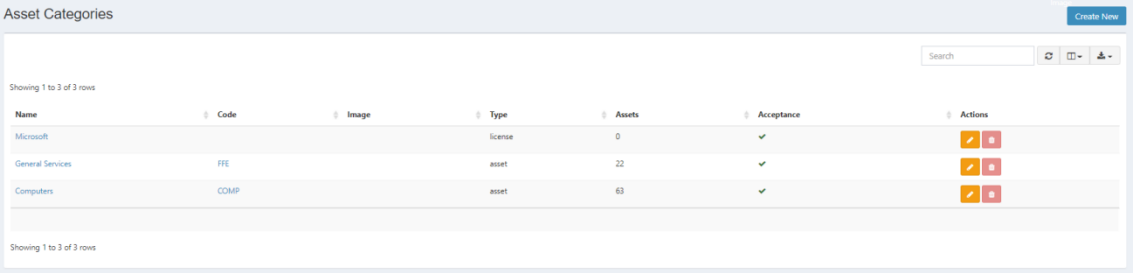

**Category Setup**

The Category Setup will provision – list, create, view, update, and delete the list of the Categories in the company. This operation can only be done by the Administrator

Menu: Settings -> Category

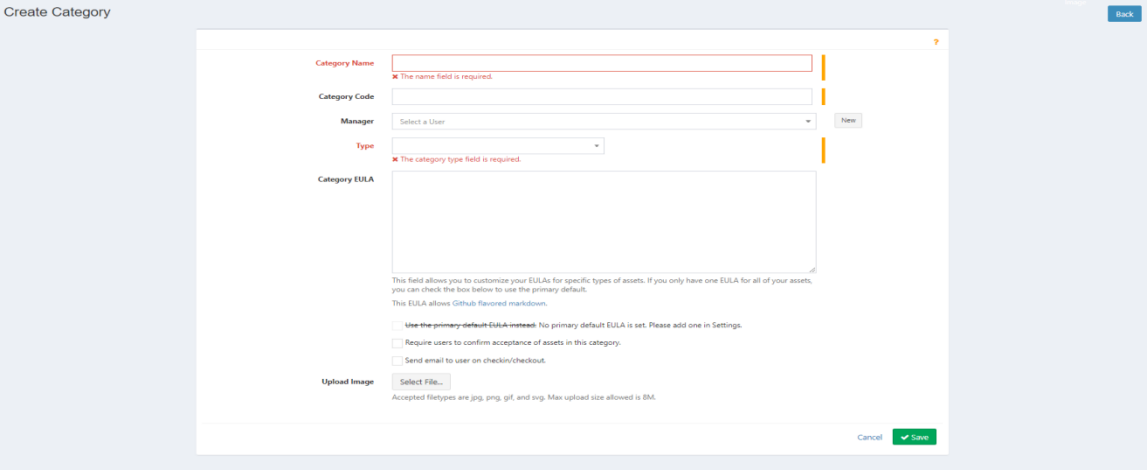

**A. List**

The list can be searched, refreshed, customized the column to be viewed and exported to different formats (csv, excel, word, text, json, xml, pdf, tsv).

**B. Create**

**Action**: Click the “Create New” button

**Procedure**:

1.Input Category Name and Code

2.Select a Manager

3.Choose what type of asset

4.You can set what type of notification needed by checking the boxes.

5.Select the file and upload the logo or image of the Category.

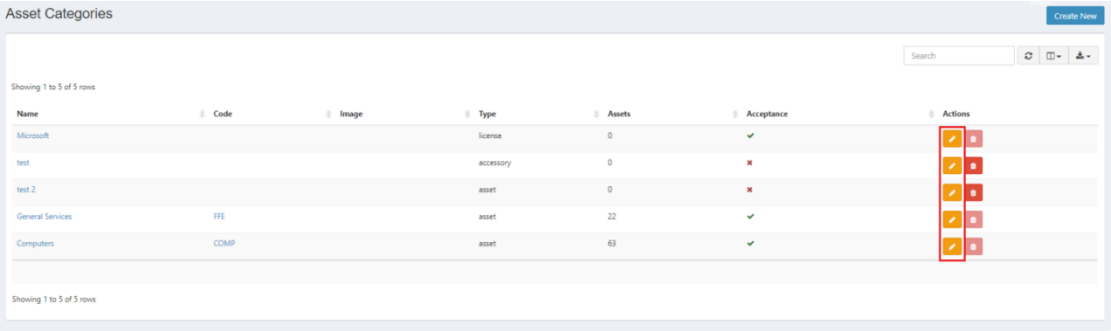

Accepted filetypes are jpg, png, gif, and svg. Max upload size allowed is 8M.

6.Click the “Save” button.

**Result**: A new Supplier is created and displayed on the Supplier list.

### C. View and Update

**Action**: Click the “Edit” (orange) button at the Action column

**Procedure**:

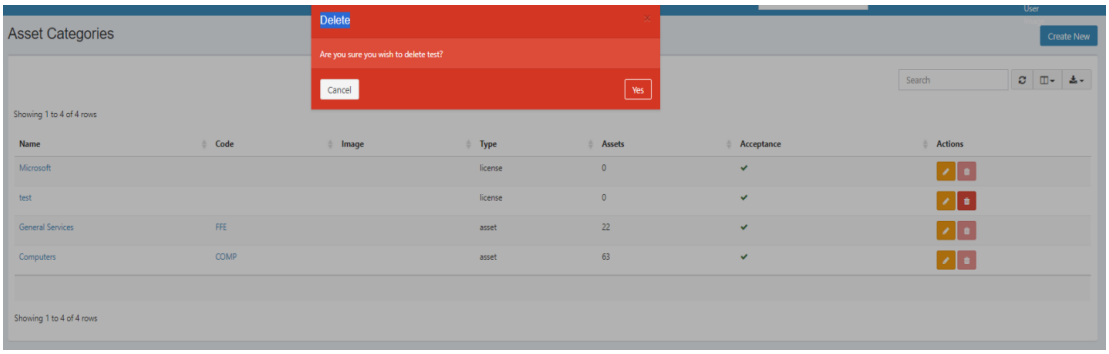

1.Edit the information needed.

2.Click Select File to change the uploaded image or logo of the Category.

### D. Delete

**Action**: Click the “Delete” (red) button at the Action column.

**Note**: You can only delete categories if you select the “Require users to confirm acceptance of assets in this category.” checkbox in creating a new also Category can only be deleted if there are no assets assigned. (Still need clarification)

**Result**: The Supplier is deleted and removed from the Suppliers list.

### Model Setup

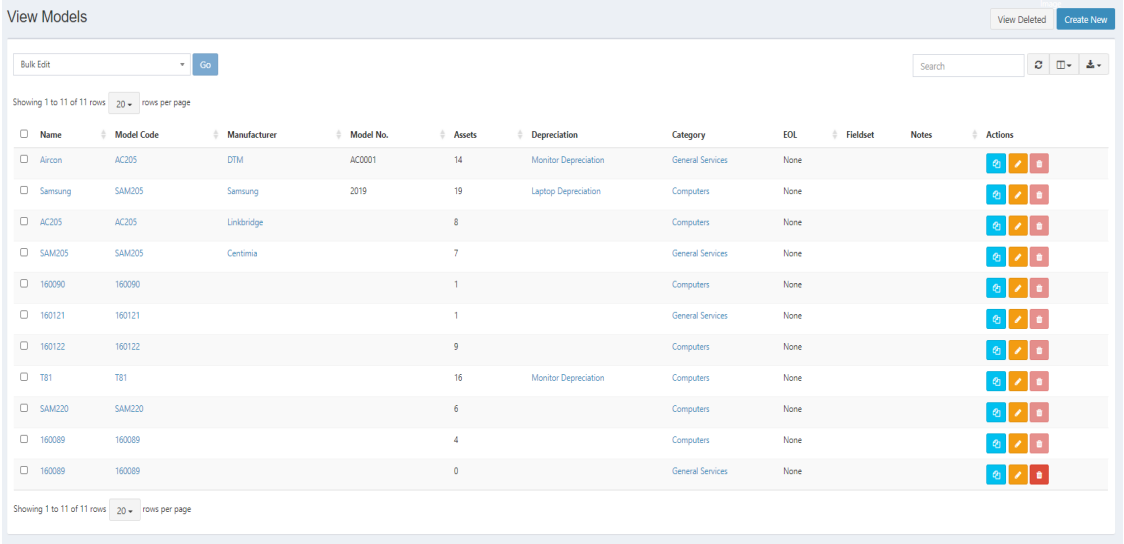

The Model Setup will provision – list, create, view, update, clone and delete the list of the Models in the company. This operation can only be done by the Administrator.

This operation determine of what type of depreciation value is needed.

Menu: Settings -> Asset Models

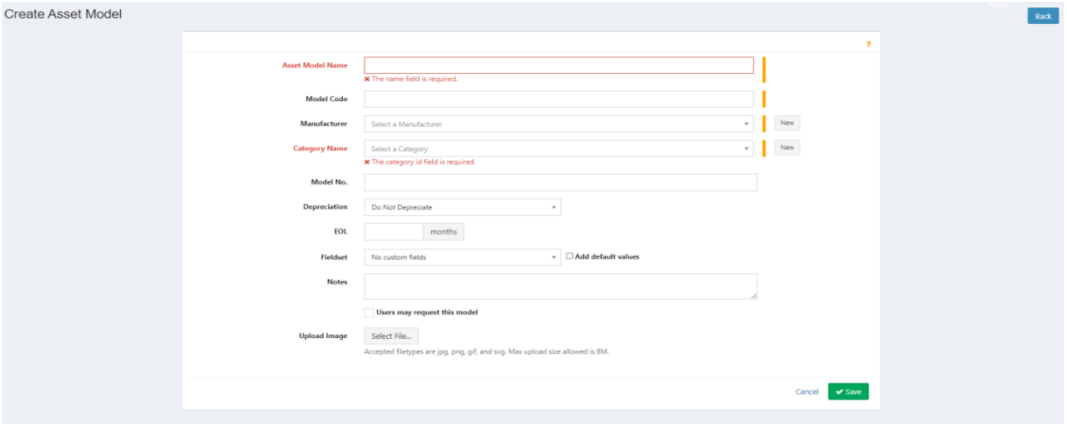

## A. List

The list can be searched, refreshed, customized the column to be viewed and exported to different formats (csv, excel, word, text, json, xml, pdf, tsv).

## B. Create

**Action**: Click the “Create New” button

**Procedure**:

1. Input Asset Model Name and Code
2. Select Manufacturer from the drop-down list
3. Select a Category from the drop-down list
4. Input Model Number
5. Input number of months
6. Select fieldset from the drop-down list
7. Input notes
8. Select the file and upload the logo or image of the Category.

Accepted filetypes are jpg, png, gif, and svg. Max upload size allowed is 8M.

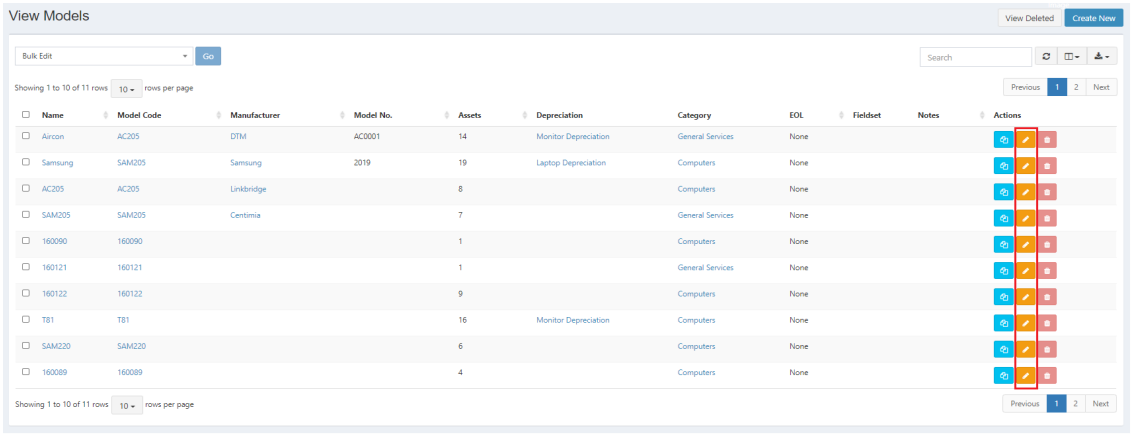

9. Click the “Save” button.

**Result**: A new Modelis created and displayed on the Modellist.

*(Configuration’s Asset Information Setup continuation)*

### C. View and Update

**Action**: Click the “Edit” (orange) button at the Action column. You can also select multiple models by checking the box and update or delete by selecting Bulk Edit or Bulk Delete from the drop-down list.

**Procedure**:

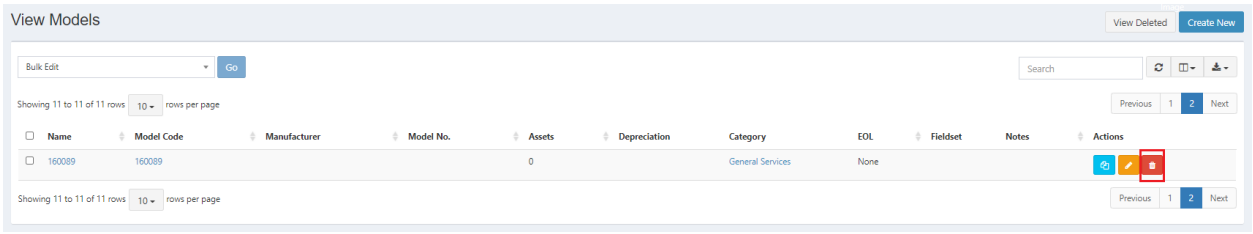

1.Edit the information needed.

2.Click Select File to change the uploaded image or logo of the Category.

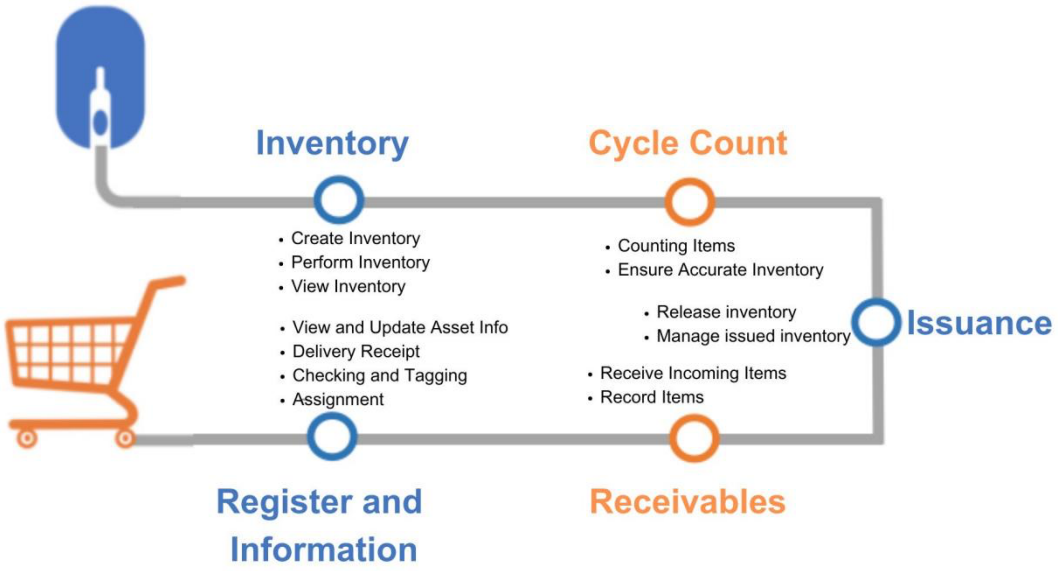

### D. Delete

**Action**: Click the “Delete” (red) button at the Action column.

**Note**: Model can only be deleted if there is no asset listed.

# OPERATION

The picture shown are the operations of the life cycle of an asset.

| No | Operation | Summary |
|---|---|---|
| 1 | Register and Information | This procedure is the registration of assets in the system also the viewing of detailed information of the asset as well as updating the information. |
| 2 | Receivables | This procedure tracks the process of receiving assets into inventory, ensuring accurate recording of quantities and details. |
| 3 | Issuances | This procedure monitors the distribution of inventory items to designated users or locations, documenting the reduction in stock levels. |
| 4 | Cycle Count | This procedure involves periodically verifying inventory levels for specific items to ensure accuracy and identify discrepancies. |
| 5 | Inventory | This procedure is the physical accounting of the assets. |

## REGISTER

This is the entry of asset to the system. Assets can be registered in bulk via asset import.

**Bulk Registration – Item Master Data**

The Bulk Registration Setup will commence. This is the process that allows the administrator to import assets all at once. When utilized as instructed, this process will save time, promote consistency, and reduce data entry errors.

**A. Importing**

**Procedure:**

**1.Import directories**

A. Go to Local Disk C:\xampp\htdocs\wms\sample_csvs\SAP\assets for importing assets

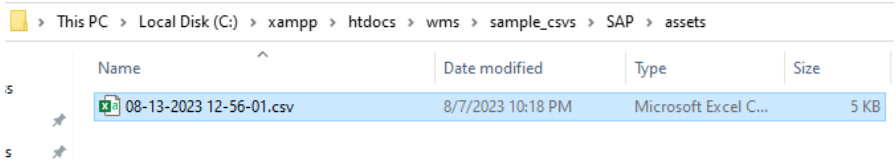

B. Go to Local Disk C:\xampp\htdocs\wms\sample_csvs\SAP\receivables for importing receiving assets

C. Go to Local Disk C:\xampp\htdocs\wms\sample_csvs\SAP\issuances for importing issuances

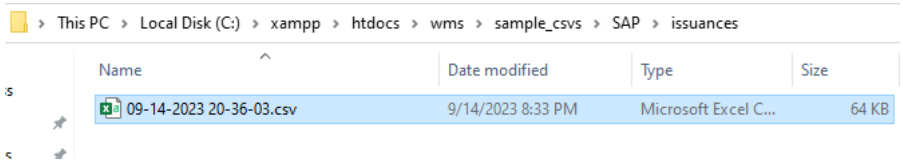

D. Go to Local Disk C:\xampp\htdocs\\wms\sample_csvs\SAP\cycle for importing cycle count

**2.Copy and paste the CSV file in the assets folder**

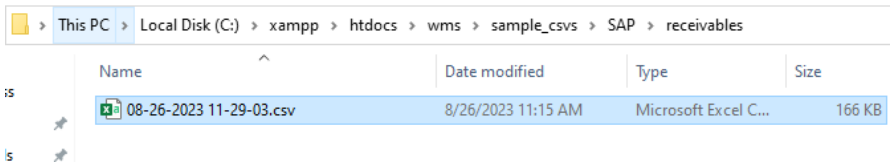

A. Assets

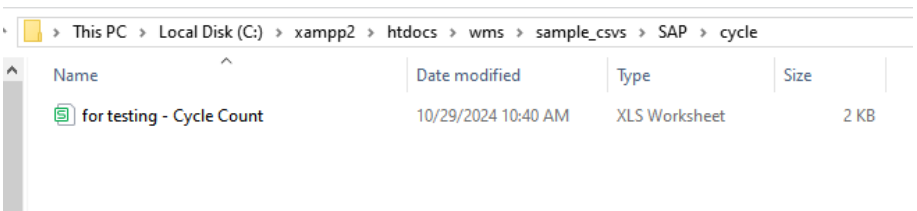

B. Issuances

C. Receivables

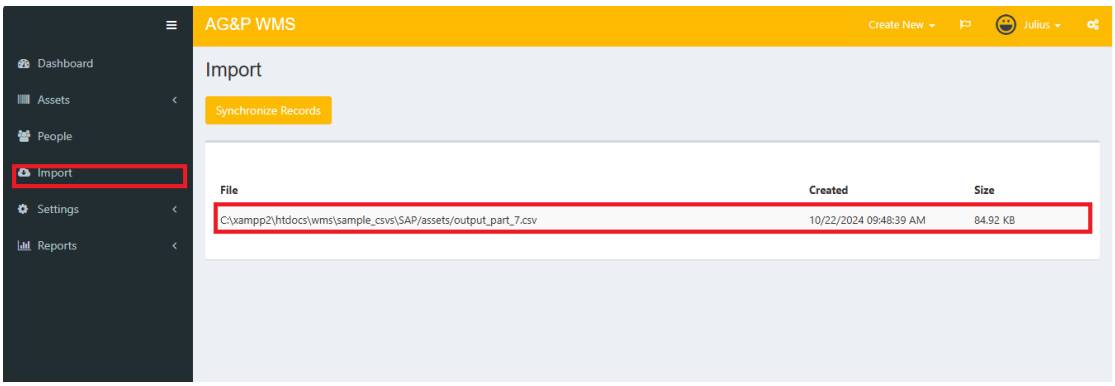

D. Cycles

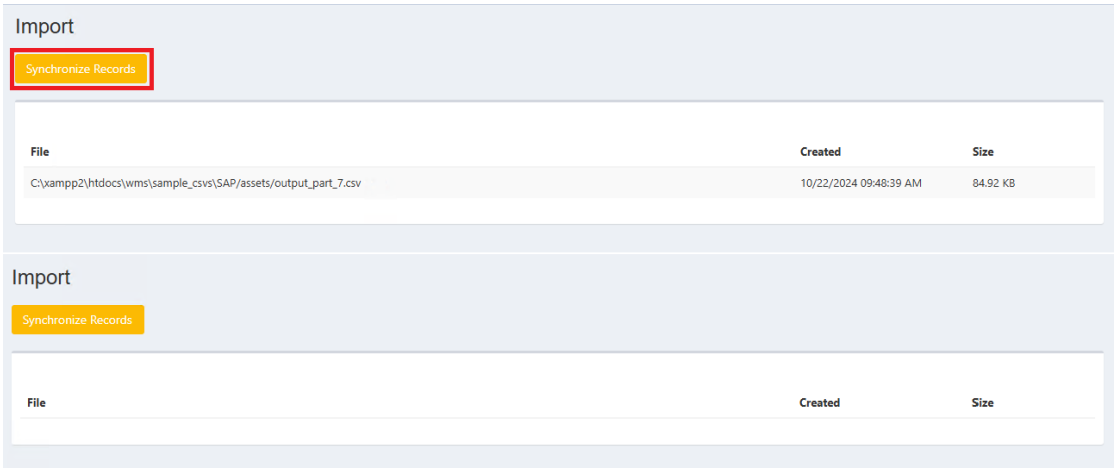

*(Operation's Register continuation)*

**3.Go to Navigation Bar at (left side of your screen): Click 'Import' you will see if the file is ready to be uploaded)**

**4.Click 'Synchronize Records' and the record will be updated.**

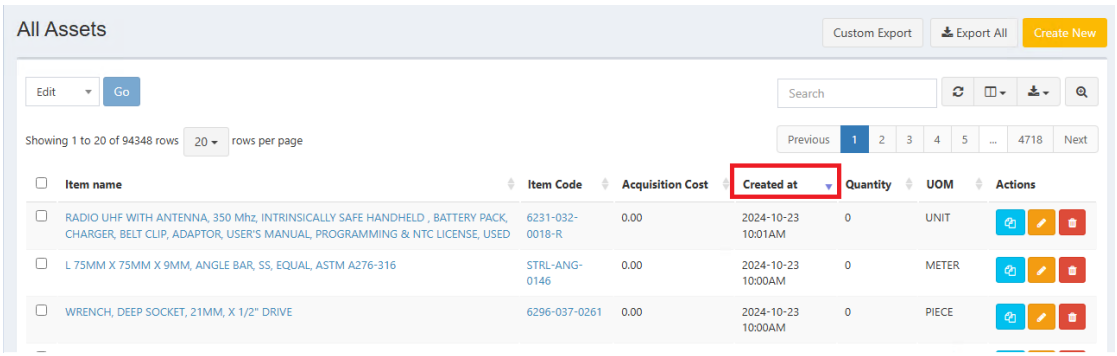

**After you click Synchronize, the file be will removed from the Import page.**

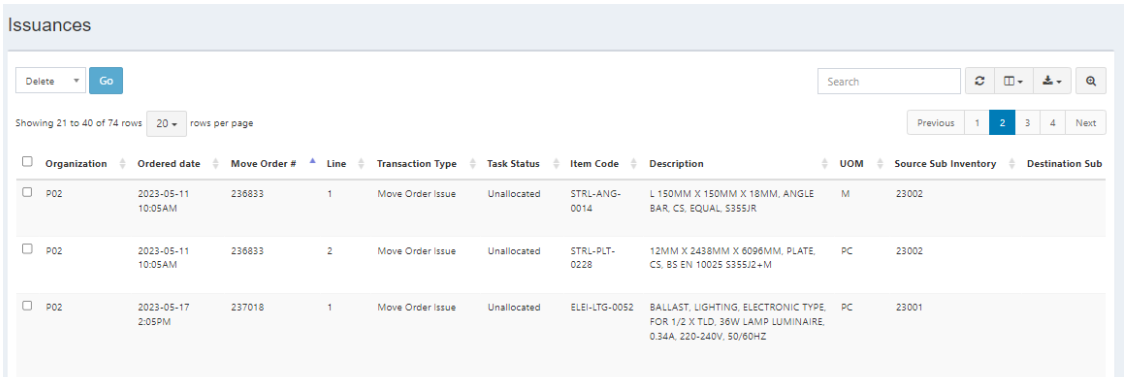

**5.To check if the files are already uploaded,**

**Go to navigation bar (left side of your screen)**

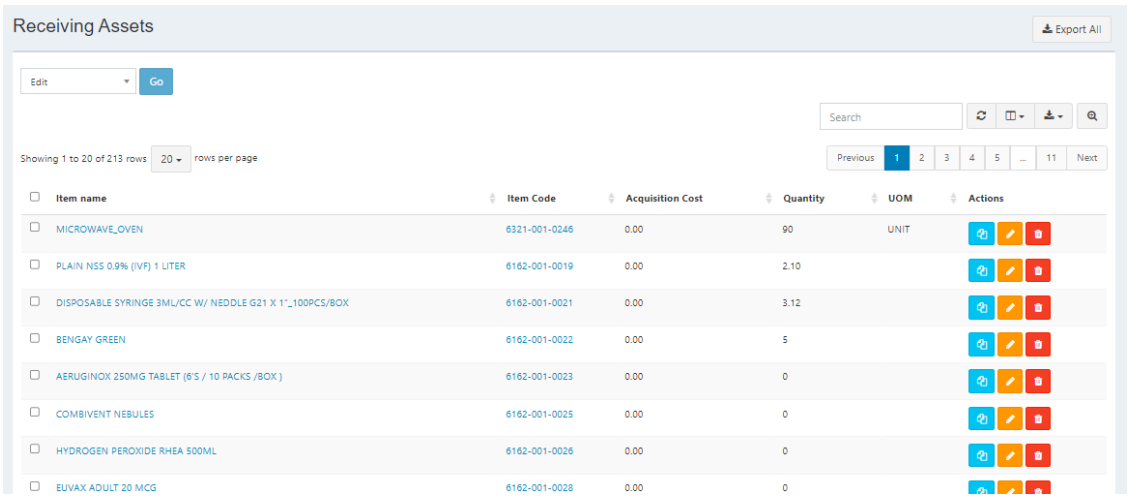

A. For Assets: Click Assets>List All>Created At

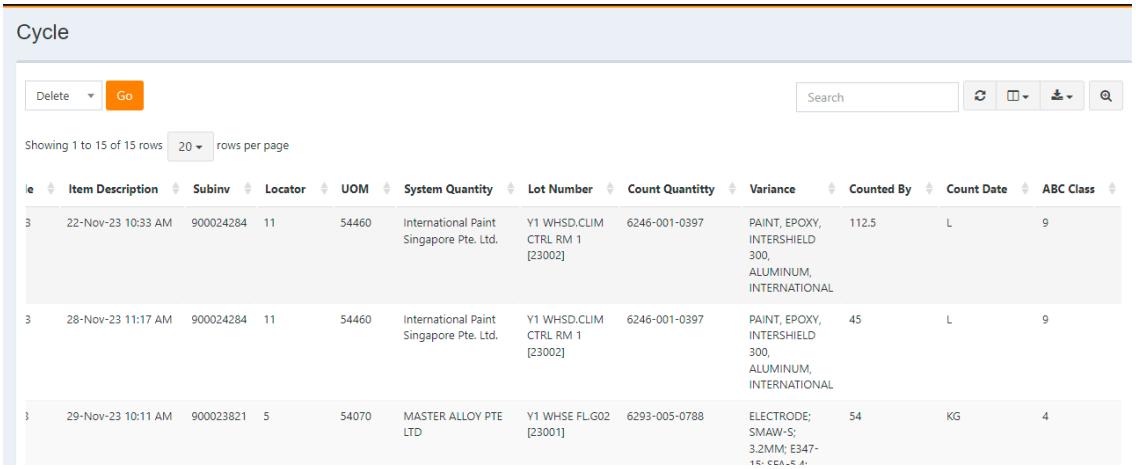

B. For Issuances: Click Issuances

C. For Receiving Assets: Click Receivables

D. For Cycles: Click Cycle

**Result**: New record of assets, issuance, receivables and cycle counts are imported and displayed on their desired folder.

*(Operation's continuation)*

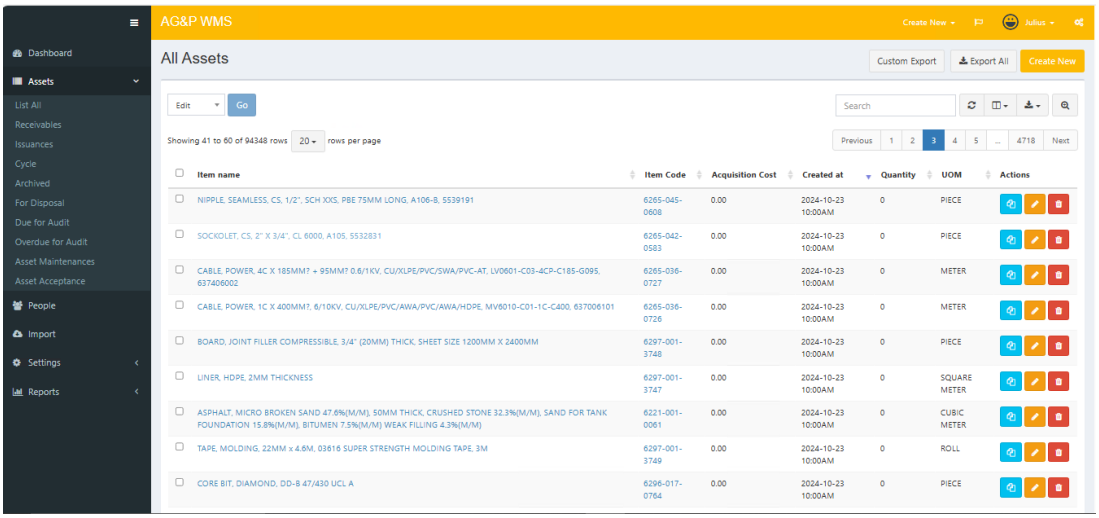

## INFORMATION

This procedure will display the detail information of the asset.

### Asset Listing

Select the menus under the “Assets” to display the specific list of assets to be displayed.

Menu: Assets > List All

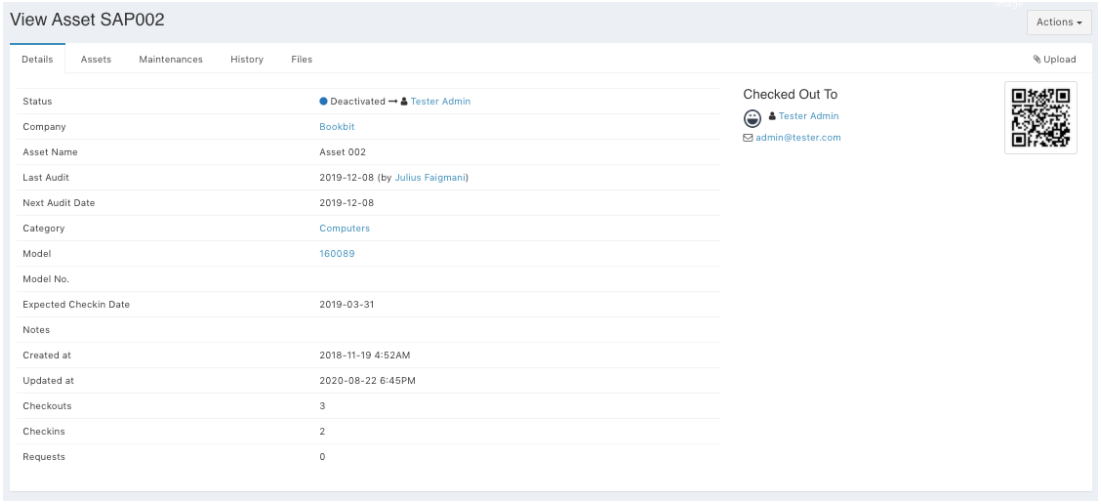

The list can be searched, refreshed, customized the column to be viewed and exported to different formats (csv, excel, word, text, json, xml, pdf, tsv).

### View

**Action**: Click an asset in the list

Details View

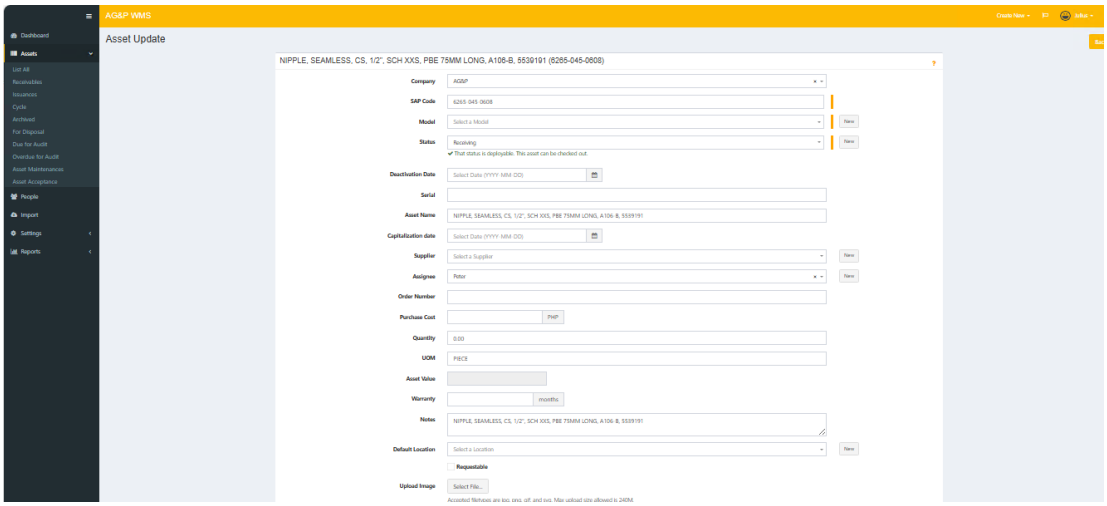

*(Operation’s Information continuation)*

**Update**

**Action**: Click “Actions -> Edit Asset”

Update View

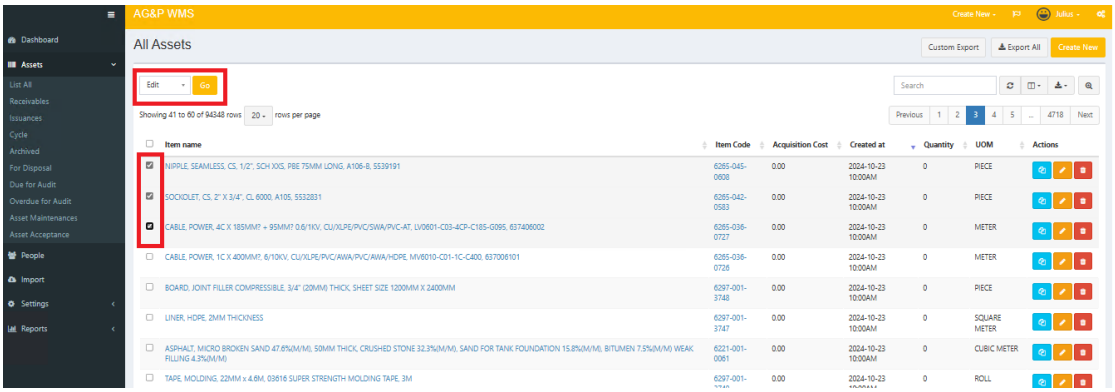

**Procedure**:

a. Fill up all the fields needed information of the asset to be modified.

b. Click the “Save” button.

Update Multiple Assets

**Procedure**:

a. Check multiple assets that you want to edit.

b. On the top menu, select “Edit” then click “Go”.

c. Fill up all the fields needed information of the asset to be modified.

d. Click the “Save” button.

**Result**: The asset is updated and the updated information can be viewed in the asset list.

*(Operation’s continuation)*

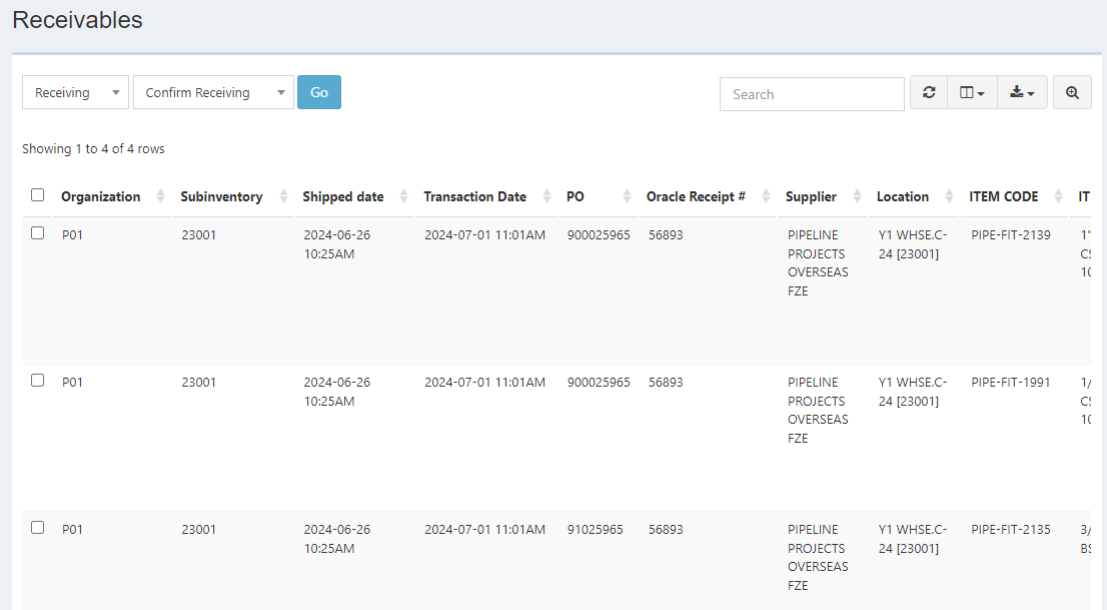

## RECEIVABLES

Receivables record all the items received into the system. The purpose of this is to provide a detailed log of all goods or services added to inventory.

Menu: Assets>Receivables

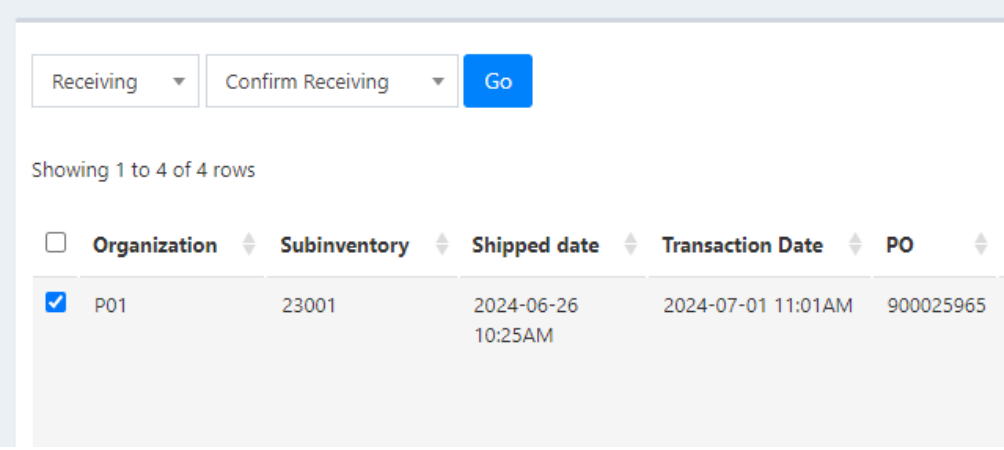

### A. Receiving > List

The list can be searched, refreshed, customized to select columns to view, and exported to various formats including CSV, Excel, Word, Text, JSON, XML, PDF, and TSV.

### B. Receiving > Confirm Receiving

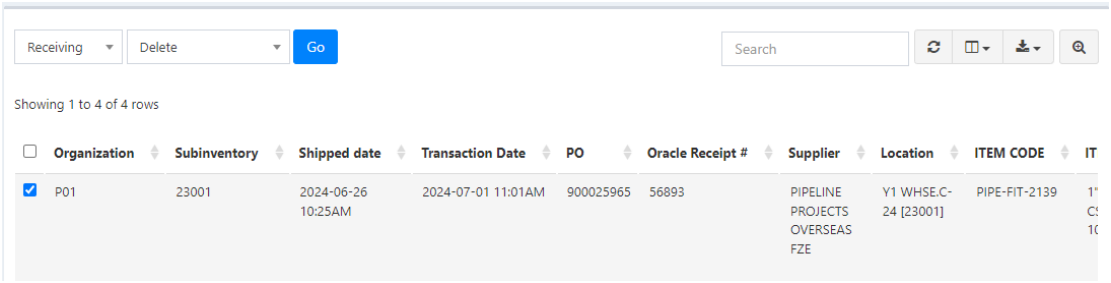

This function allows users to confirm the receipt of items. Users can select individual items using checkbox or apply actions to all items by checking the top checkbox. Confirming updates the item's status in the system.

*(Operation's continuation)*

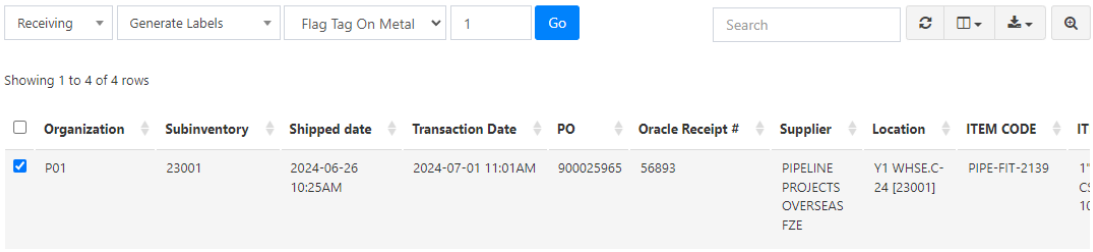

### C. Receiving > Delete

This function enables the deletion of selected receiving records. Users can mark individual items for deletion or choose the top checkbox to remove multiple records in one action.

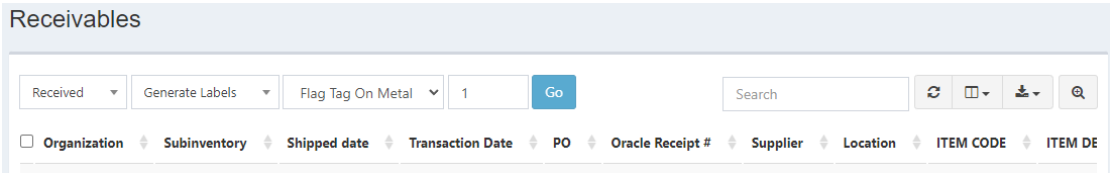

### D. Receiving > Generate Labels

This feature generates labels for selected items. Users can customize and print labels for each selected item or for the entire list by using the top checkbox option.

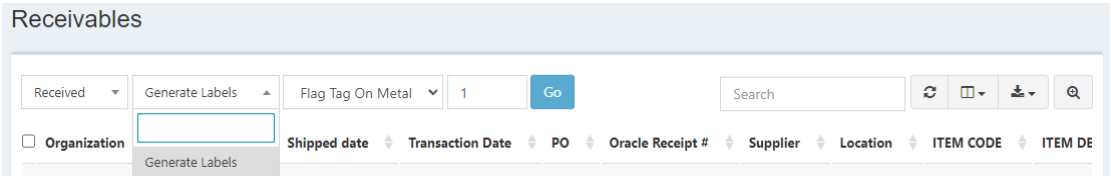

### E. Received > List

The list displays items already received, with functionalities for searching, refreshing, customizing column views, and exporting data in multiple formats such as CSV, Excel, Word, Text, JSON, XML, PDF, and TSV.

### F. Received > Generate Labels

This feature generates labels for items that have already been received. Users can select specific items or apply the action to all option.

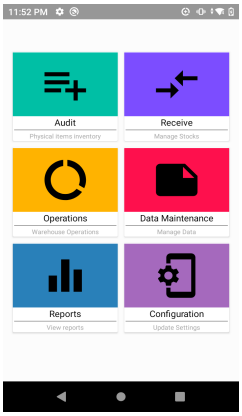

*(Operation's continuation)*

## Menu: Mobile App

### G. Receive

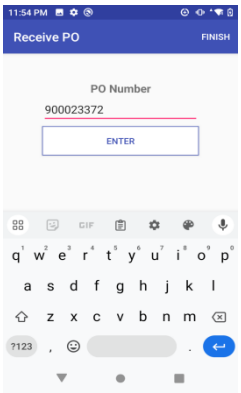

This feature allows users to quickly find and access received assets by typing the Purchase Order (PO) number.

**Action**: Click “Receive”

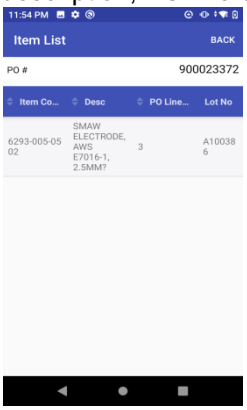

**Action**: Enter the PO number in the search bar. The system fetches and displays the corresponding received assets linked to the entered PO number.

**Action**: Users can view detailed information about each asset, such as item code, description, PO line etc.

*(Operation’s continuation)*

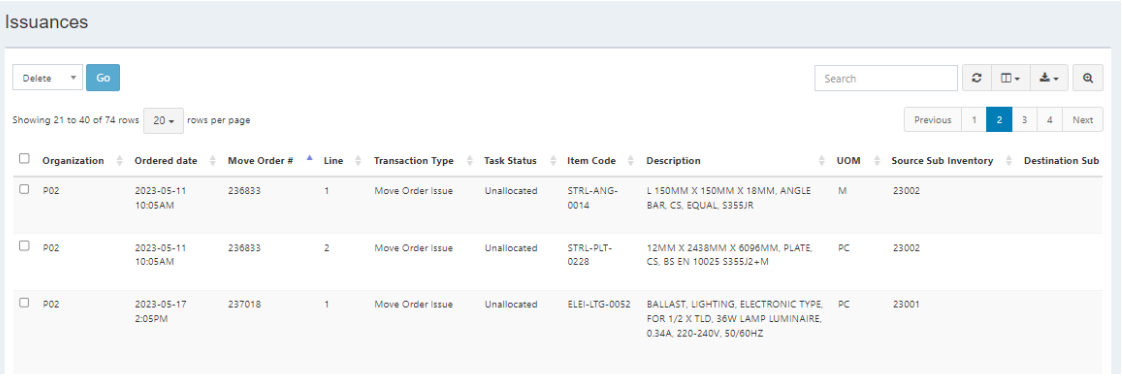

## ISSUANCES

Issuances track all the items distributed from inventory. The purpose of this is to maintain a clear record of stock reductions and their intended recipients.

Menu: Assets -> Issuances

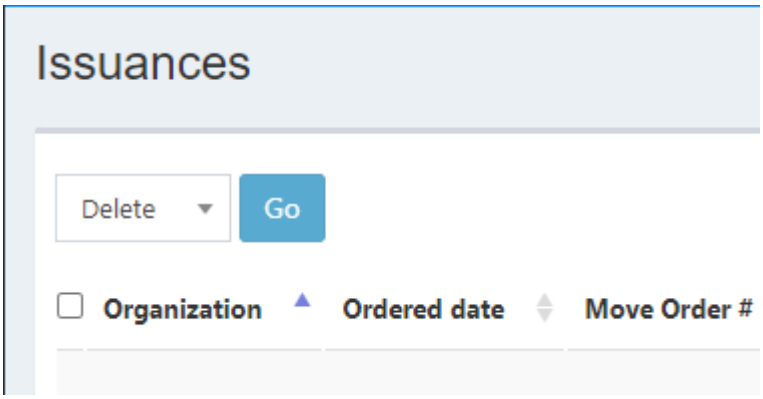

### A. List

The list can be searched, refreshed, customized to select columns to view, and exported to various formats including CSV, Excel, Word, Text, JSON, XML, PDF, and TSV. Users can also select individual items using checkboxes or apply actions to all items by using the 'Select All' option.

### B. Delete

This function enables the deletion of selected issuance records. Users can mark individual items for deletion or choose 'Select All' to remove multiple records in one action.

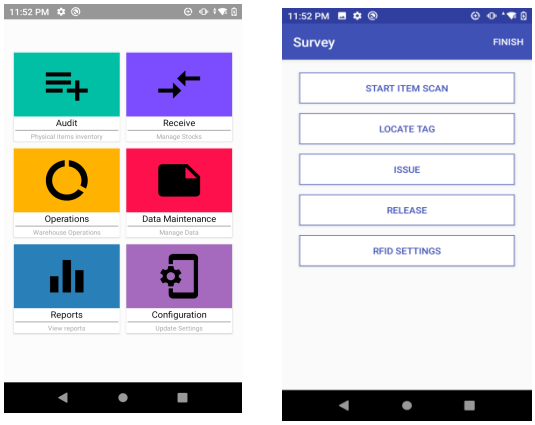

*(Operation's continuation)*

## Menu: Mobile App

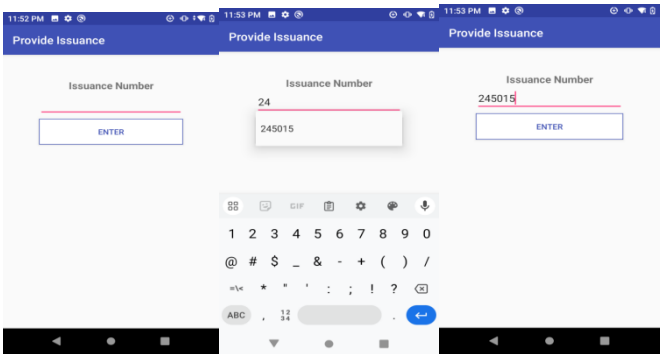

### C. Issue

This feature allows users to quickly find items for issuance by typing the Move Order (MO) number. The system retrieves the relevant item details, including balance and issued quantity, enabling users to issue items accurately and efficiently.

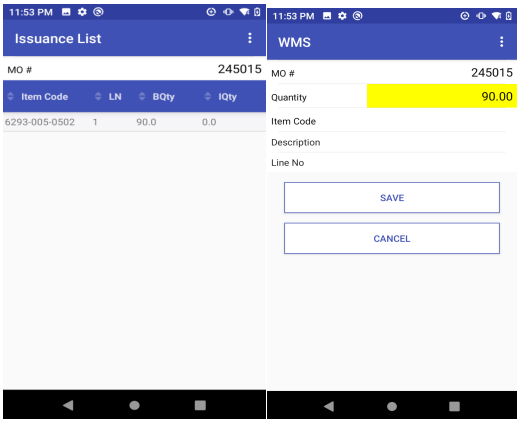

**Action**: Click "Operation > Issue"

**Action**: Enter in the issuance number the MO (move order) number. The system fetches the corresponding item(s) associated with the entered MO number.

**Action**: Users can then proceed to issue the item by confirming the quantity to be issued.

*(Operation's continuation)*

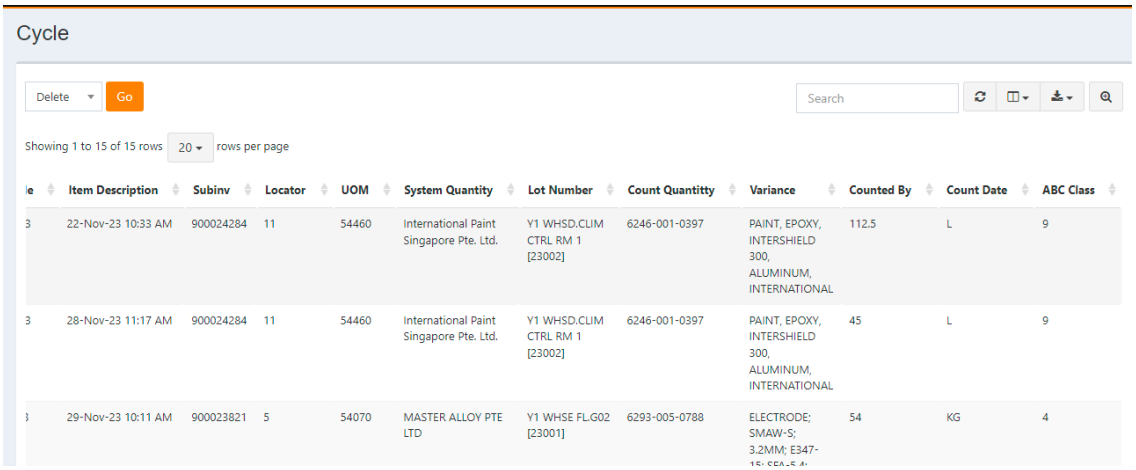

## CYCLE COUNTS

Cycle Count logs periodic checks of inventory levels. The purpose of this is to ensure the accuracy of stock records and identify any discrepancies in real-time.

Menu: Assets-> Cycle

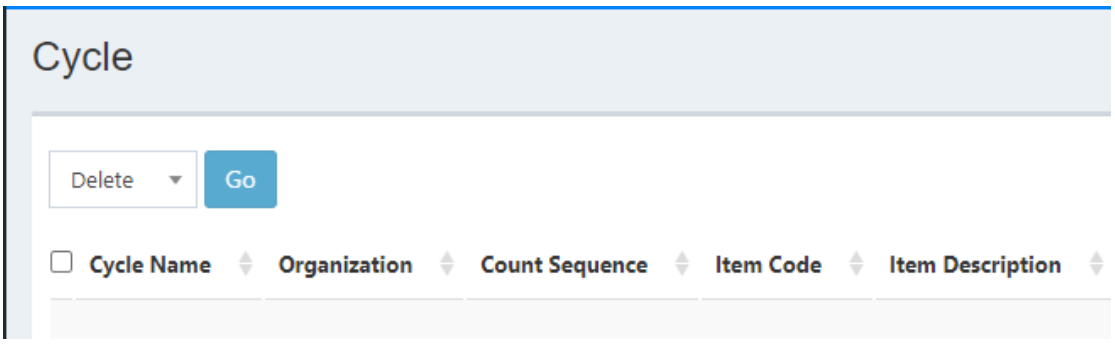

### A. List

The list can be searched, refreshed, customized to select columns to view, and exported to various formats including CSV, Excel, Word, Text, JSON, XML, PDF, and TSV. Users can also select individual items using checkboxes or apply actions to all items by using the 'Select All' option.

### B. Delete

This function enables the deletion of selected issuance records. Users can mark individual items for deletion or choose 'Select All' to remove multiple records in one action.

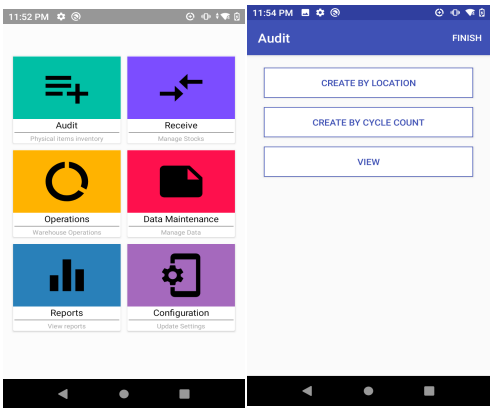

*(Operation's continuation)*

## Menu: Mobile App

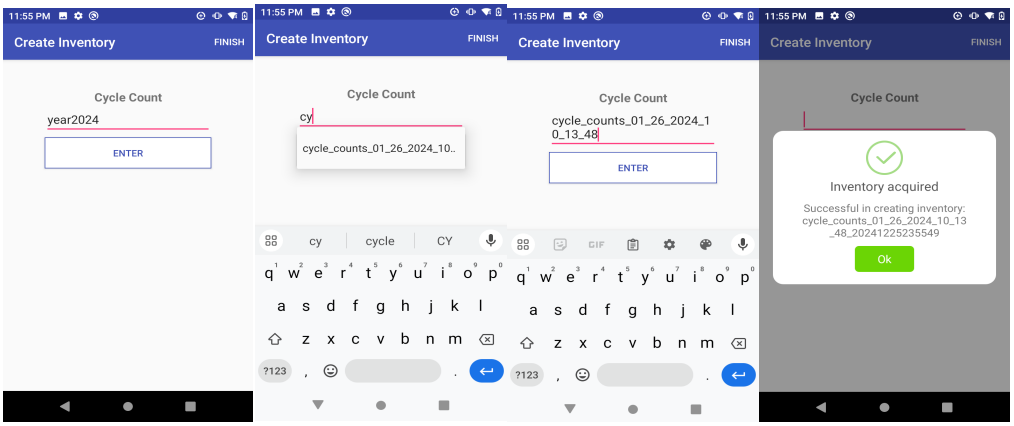

### C. Audit

This feature allows users to create a cycle count audit by entering a Cycle Count Name.

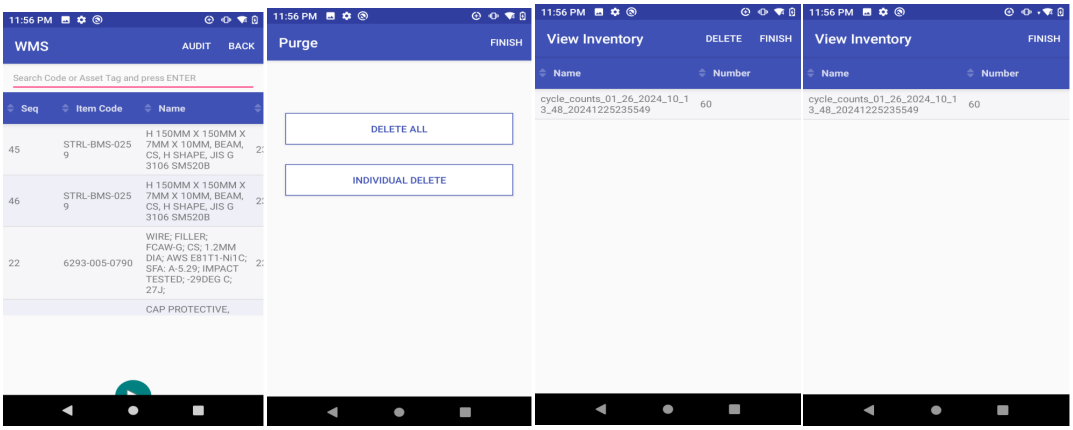

**Action**: Click "Audit> Create by cycle count"

**Action**: The user enters the Cycle Count Name in the provided field. If the entered name matches the records, the system proceeds to create the cycle count. The inventory is then added to the system for further auditing.

**Action**: **Audit**: Review and verify the acquired inventory data. **Purge**: Delete the created cycle count from the system if it's no longer needed.

*(Operation's continuation)*

## INVENTORY

Inventory is the process of accounting assets and make sure that all assets are found. WMS uses a mobile device with embedded barcode or QR code or RFID readers to easily read the tags in the assets.

The process starts with "creating inventory" which downloads asset data from WMS System to the WMS mobile application. Then "perform the inventory" using the mobile device with embedded barcode, QR code or RFID tag readers. After which the result of the inventory will then be uploaded to the WMS system.

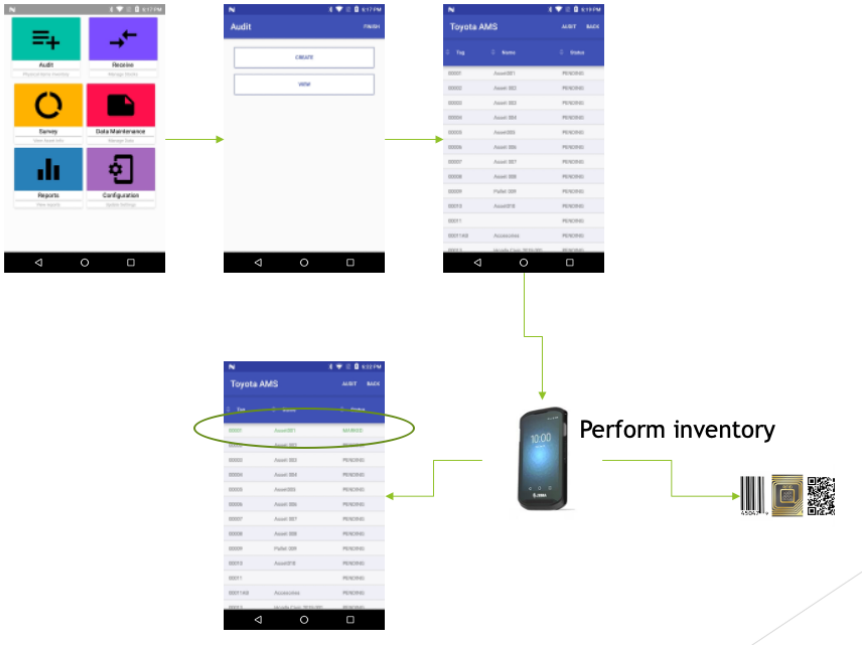

### 1. Create Inventory

Creating inventory starts by selecting "Audit" menu from the main screen and will launch the Audit screen. Select the "CREATE" button from the Audit screen and will launch the "Create Inventory" screen. List of locations are acquired while launching the "Create Inventory" screen to be able to select the locations to be created with inventory. Enter the desired location and it will call an API to the WMS system to return the list of assets under the location and displayed on "Asset List" screen.

*(Operation's Inventory continuation)*

**2. Perform Inventory**

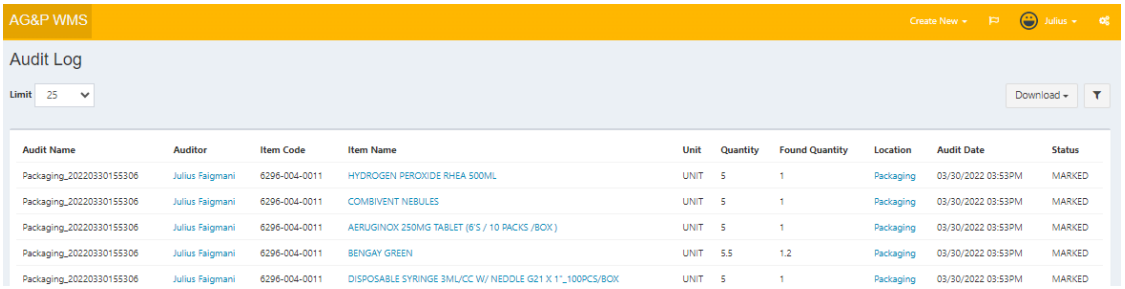

This process starts with "Asset List" screen. It can either be accessed after creating the inventory or after viewing the created inventories. To read the tags, press the "Scan" button on the mobile device to detect the barcode or QR code or RFID tags. Once the tag is read and is identified belonging to the location, the status will change from "PENDING" to "MARKED". In case the read tags do not belong to the list, it will be added in the list and status set as "ALIEN".

**3. Generate Inventory Report**

*(Operation's Inventory continuation)*

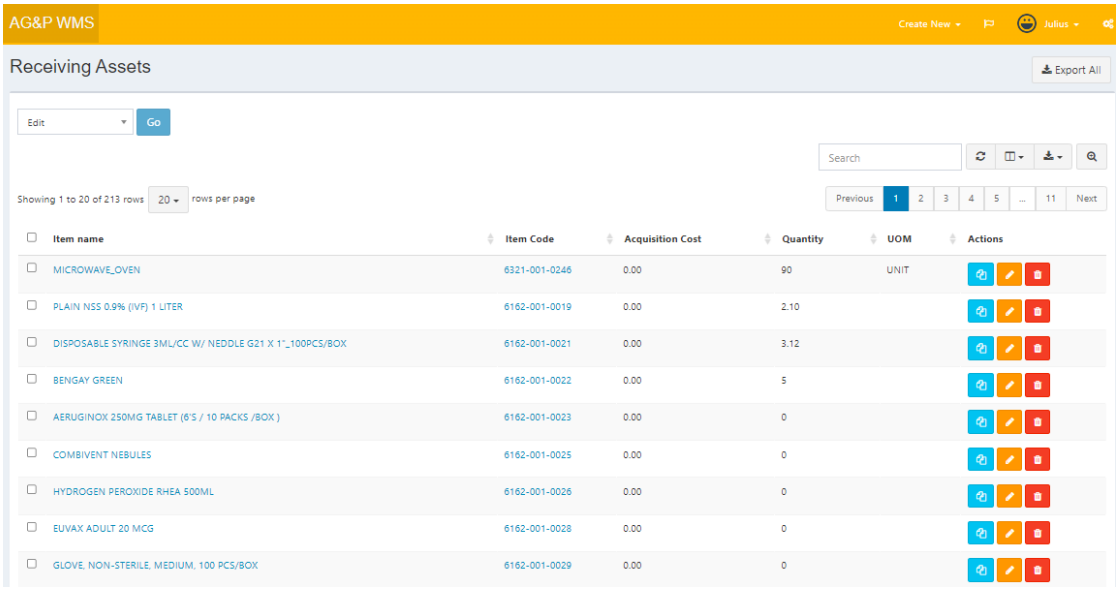

| Audit Name | Auditor | Item Code | Item Name | Unit | Quantity | Found Quantity | Location | Audit Date | Status |
|---|---|---|---|---|---|---|---|---|---|
| Packaging_20220330155306 | Julius Faigmani | 6296-004-0011 | HYDROGEN PEROXIDE RHEA 500ML | UNIT | 5 | 1 | Packaging | 03/30/2022 03:53PM | MARKED |
| Packaging_20220330155306 | Julius Faigmani | 6296-004-0011 | COMBIVENT NEBULES | UNIT | 5 | 1 | Packaging | 03/30/2022 03:53PM | MARKED |
| Packaging_20220330155306 | Julius Faigmani | 6296-004-0011 | AERUGINOX 250MG TABLET (6'S / 10 PACKS /BOX ) | UNIT | 5 | 1 | Packaging | 03/30/2022 03:53PM | MARKED |
| Packaging_20220330155306 | Julius Faigmani | 6296-004-0011 | BENGAY GREEN | UNIT | 5.5 | 1.2 | Packaging | 03/30/2022 03:53PM | MARKED |
| Packaging_20220330155306 | Julius Faigmani | 6296-004-0011 | DISPOSABLE SYRINGE 3ML/CC W/ NEDDLE G21 X 1"_100PCS/BOX | UNIT | 5 | 1 | Packaging | 03/30/2022 03:53PM | MARKED |

Once the performance of inventory is done, the result inventory result are now ready to be uploaded to the WMS system. This can be done by selecting the “Report” menu from the main screen then select the specific created inventories to be uploaded from the “Inventory View” screen. Press the “Upload” button and this will call an API to upload the data of the inventory to Inventory Report of WMS.

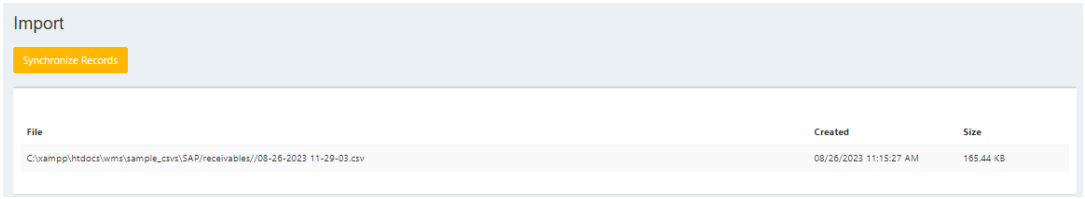

Access the inventory report in WMS system by selecting the menu “Reports” -> “Audit Log”. The result can be searched, exported and filtered.

# RECEIVING

Receiving is the process of accessing the purchased orders if they are completely received.

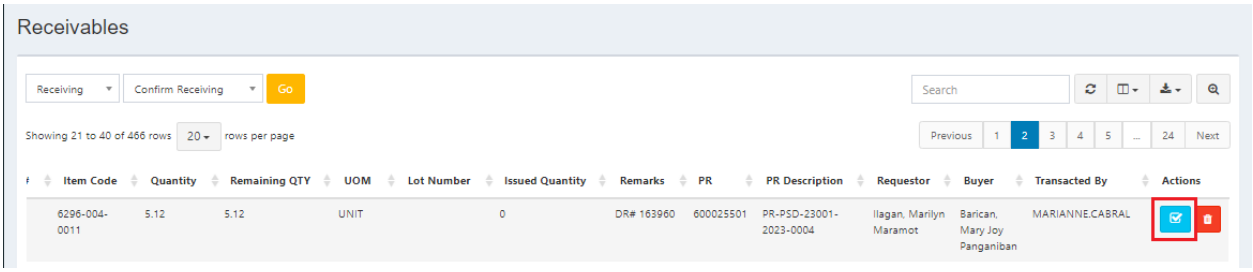

## 1. Importing

Receivables are created through the importing process located in the sidebar in which a pre-formatted csv file containing all the receiving assets are compiled and processed. In the picture above, the system can locate the file by copying the csv file in the designated directory. By clicking the Synchronize Records button, the system will automatically decode the csv file and save the data to its designated columns.

## 2. Confirm Receiving

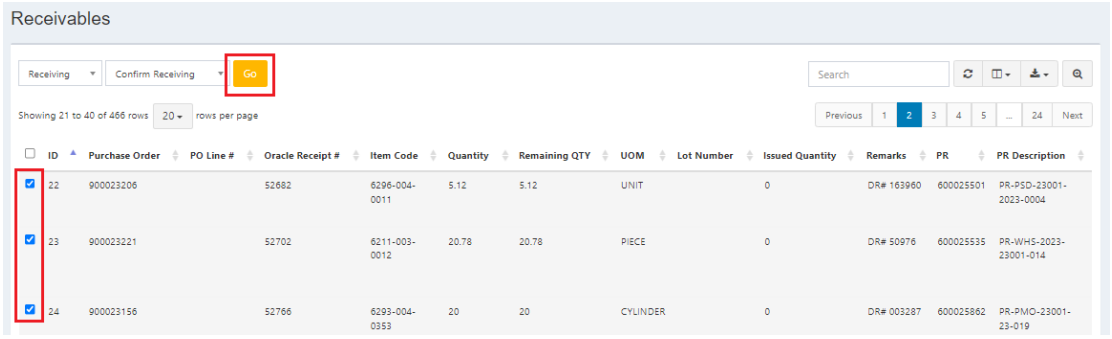

### 2.1. Single confirmation

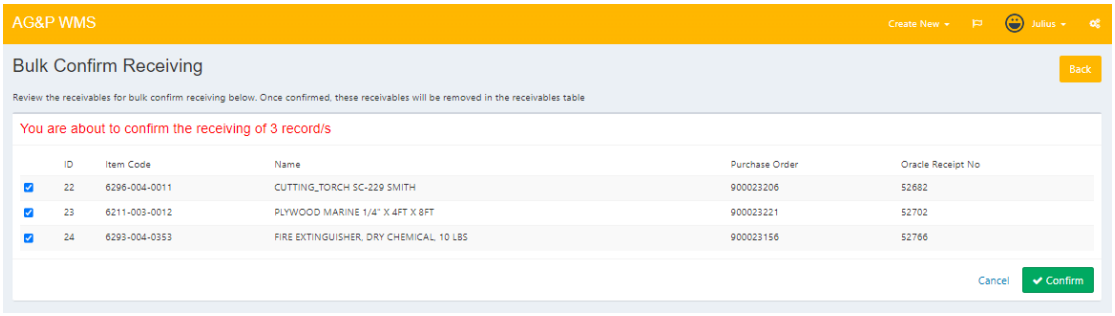

The user can confirm individually the receivable item, by clicking the confirm button as shown in the picture above. After clicking the button, a confirmation dialog will be prompted asking if the user is certain in confirming the item.

*(Receiving's continuation)*

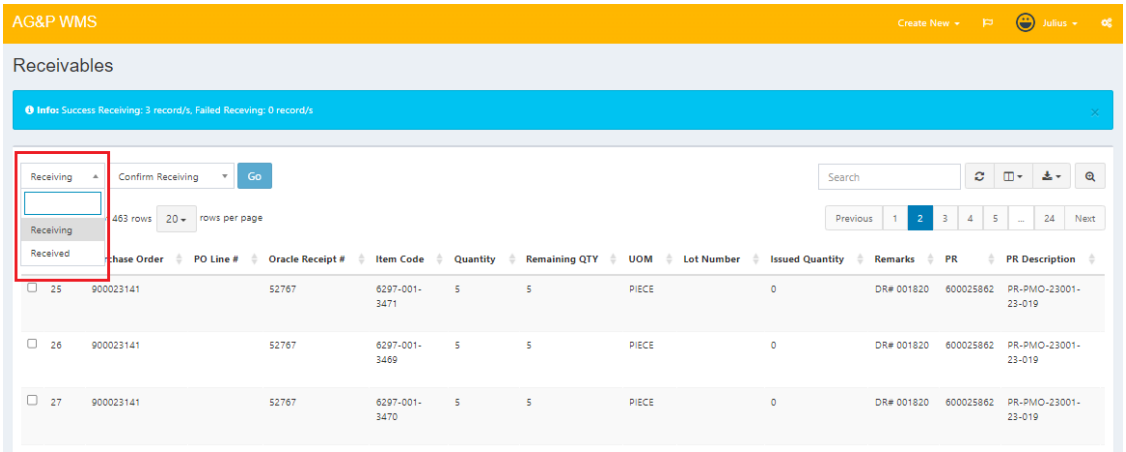

## 2.2. Batch Confirmation

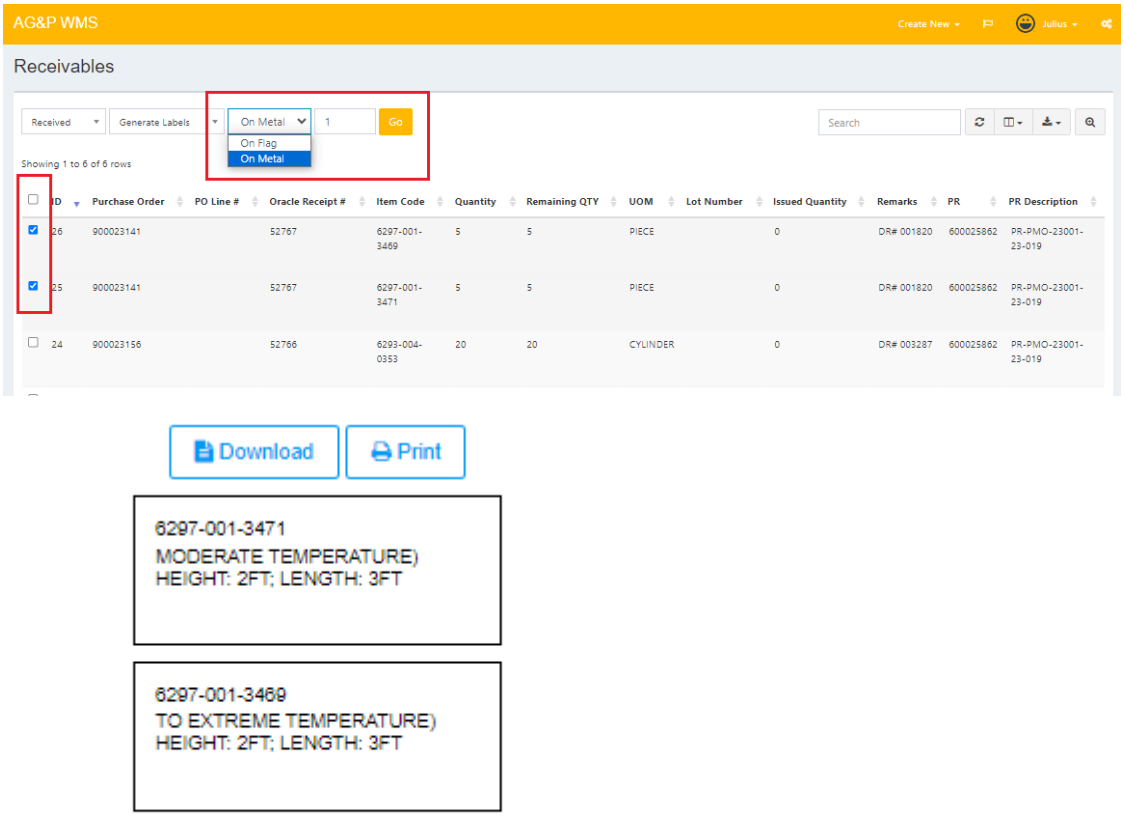

The user can also select multiple receivables then clicking the go button will redirect them to the Bulk Confirm Receiving screen. In the screen, the user could access if they selected the correct receivables. By clicking the confirm button, the receivables will be successfully received.

## 2.3. Filter Received and Receiving Status

By clicking the drop-down button, the user can select between receiving and received assets.

## 2.4. Generating Labels

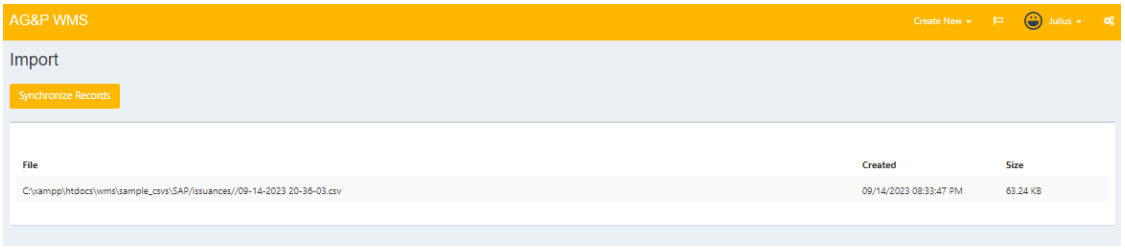

The user can generate labels by changing the receivables status to “Received”. The status should be received because only the confirmed assets are eligible in the creation of labels. In the drop-down, the user can select the type of label and, after clicking the go button, the user will be redirected to the print or download screen.

# ISSUANCES

Issuances (to update with mobile application)

**1.Importing**

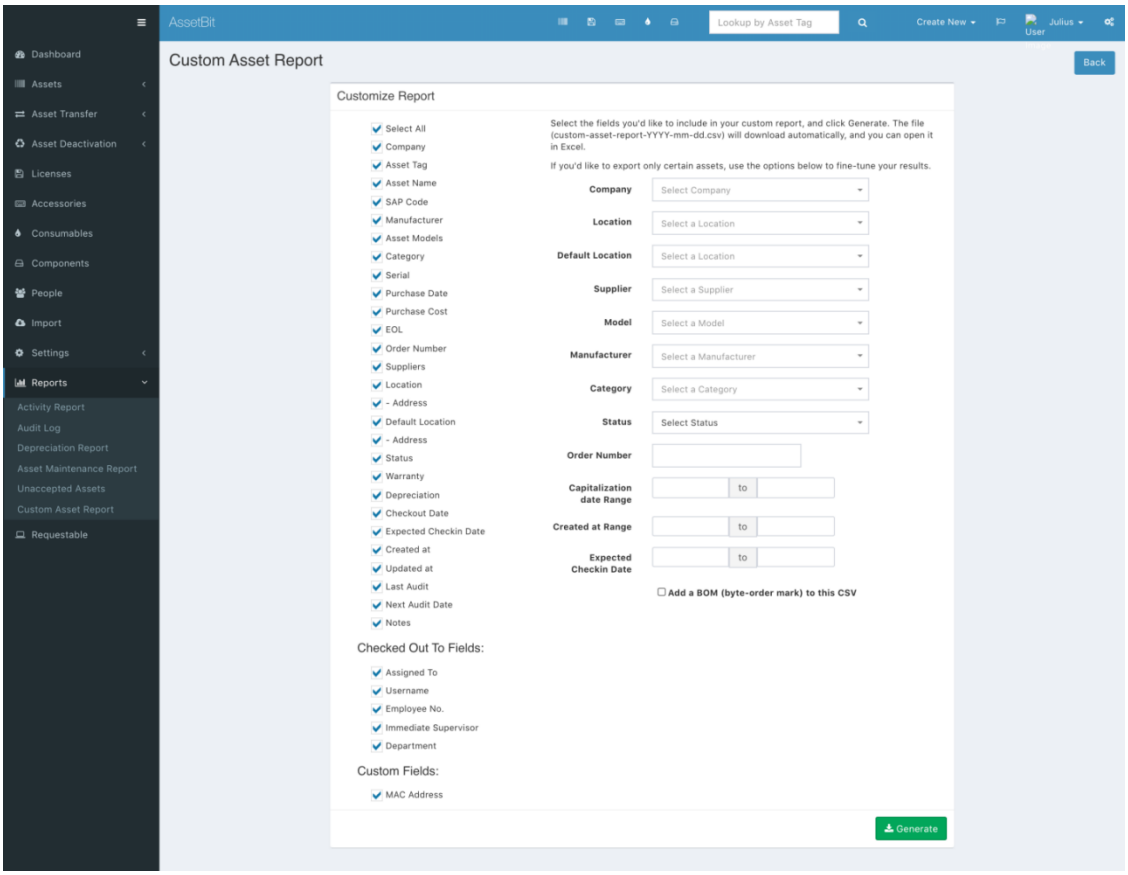

Likewise, Issuances are also created through the import function located in the sidebar and, by clicking the Synchronize Records, the issuances will be imported.

**Note**: Only the “Unallocated” Task Status, are imported.

# CUSTOM REPORTS

Custom report is the procedure to get specific data of the assets and export them into CSV file. Some of the functions have generated reports or exportable data already however this function was intended to customize the asset data to be exported.

## Menu: Reports -> Custom Asset Report

**Procedure**:

1. Select the checkbox of the asset information to be included in the report.
2. Select the filters of data.
3. Click the “Generate” button to generate CSV file that are automatically downloaded by the browser.

# APPENDIX A: PRINTING AND TAGGING

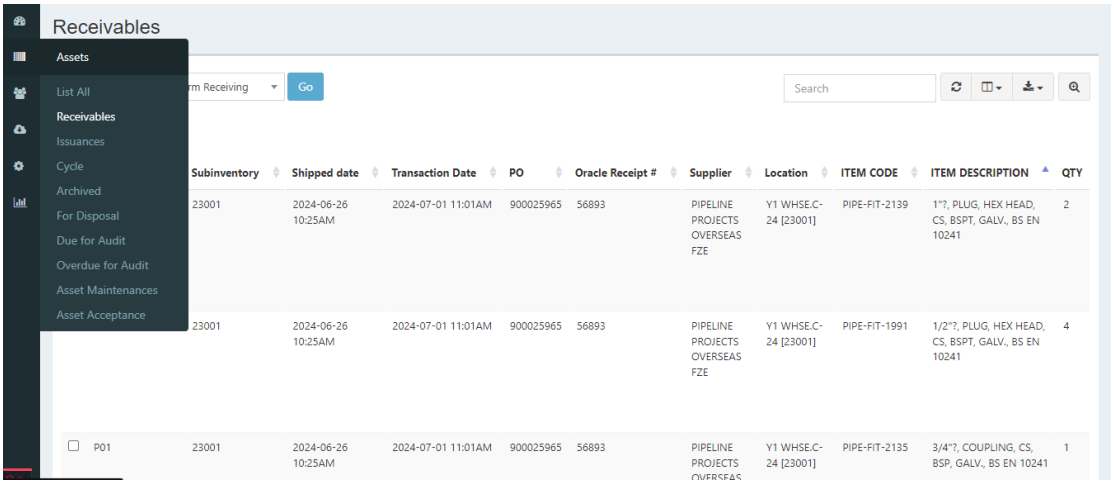

## Printing

The process of producing asset tags using the Zebra printer.

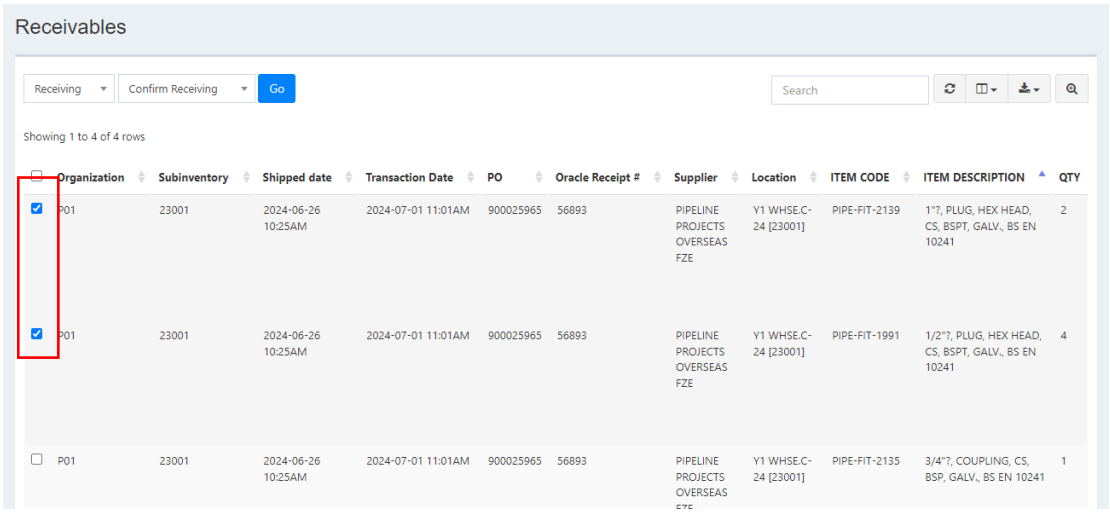

### Menu: Receivables

**Procedure**:

1.Go to Receivables

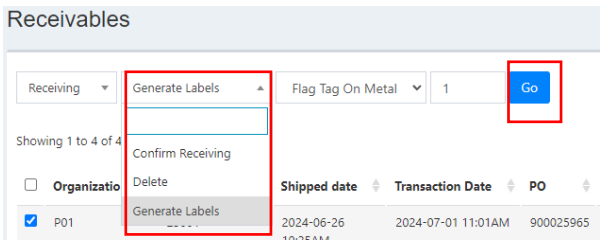

2.Choose the asset you want to generate labels for printing

4.Choose Generate Labels on the upper left selection

5.Click Go

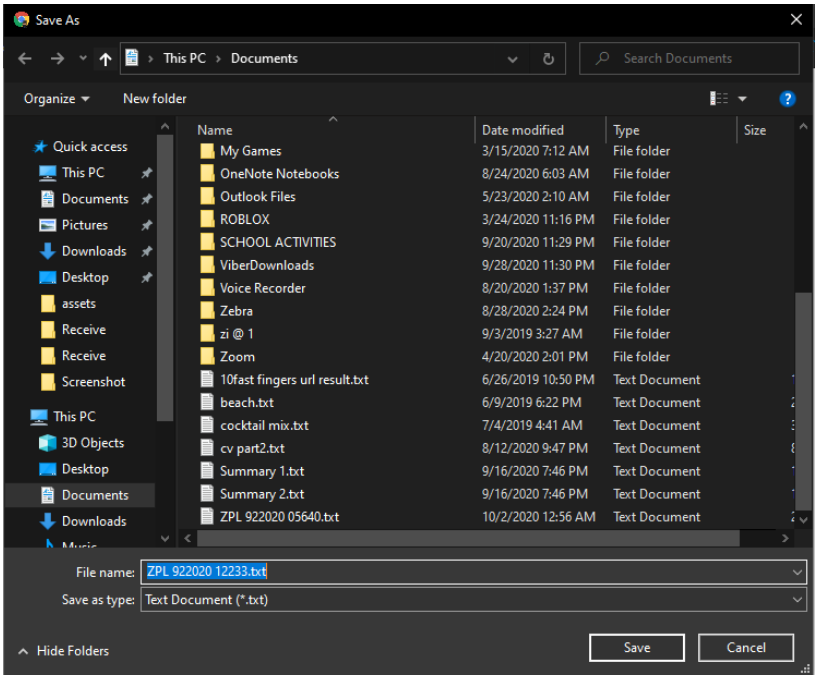

*(Appendix B continuation*

6.Labels will be generated

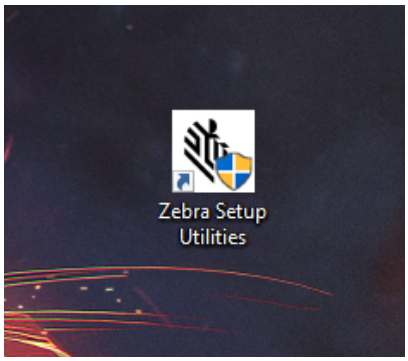

7.Click Download

8.Save file

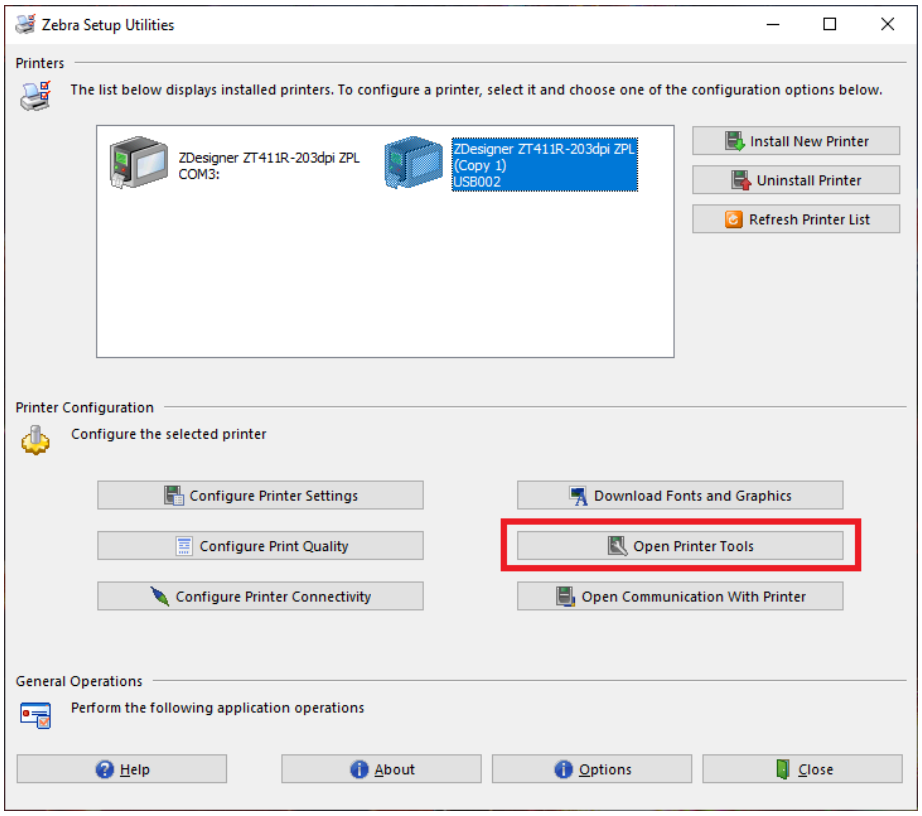

9.Open Zebra Setup Utilities

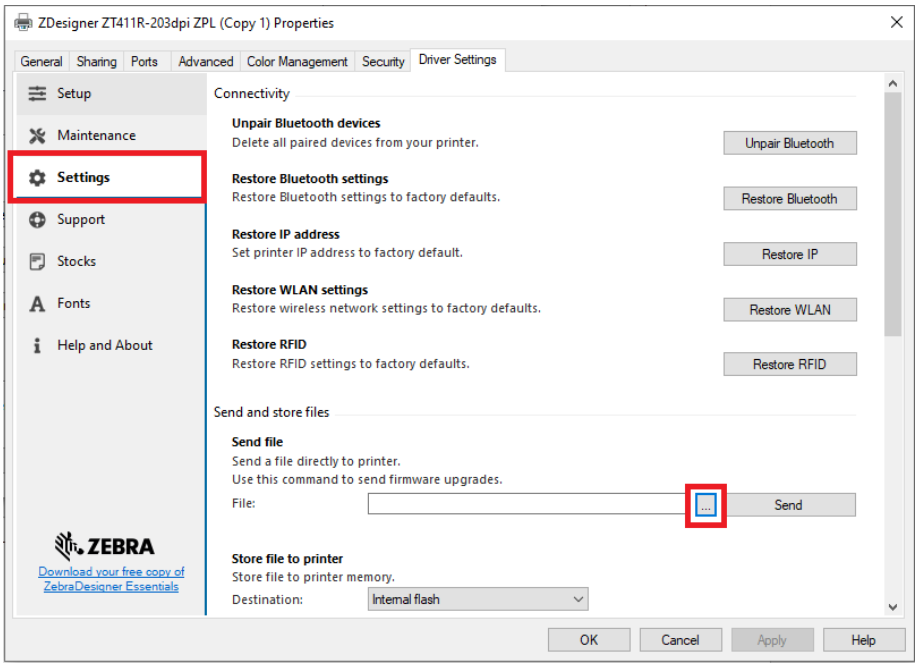

10.Choose ZDesigner ZT411R-203dpi ZPL USB002

11.Click Open Printer Tools

12.Click Settings

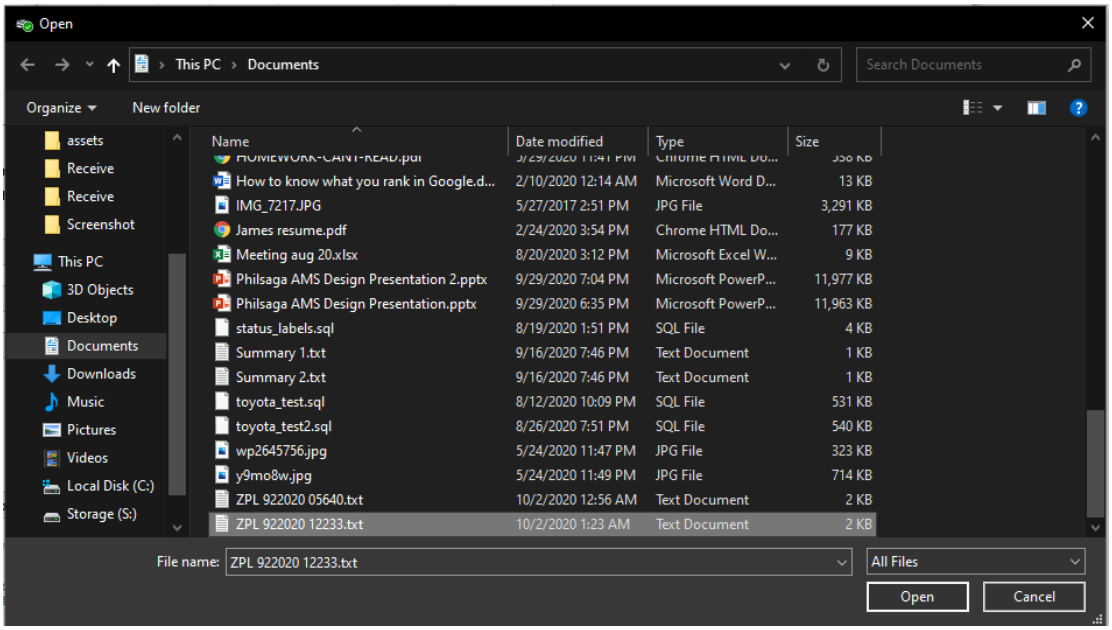

13.Click the box with 3 dots beside Send button to open a file

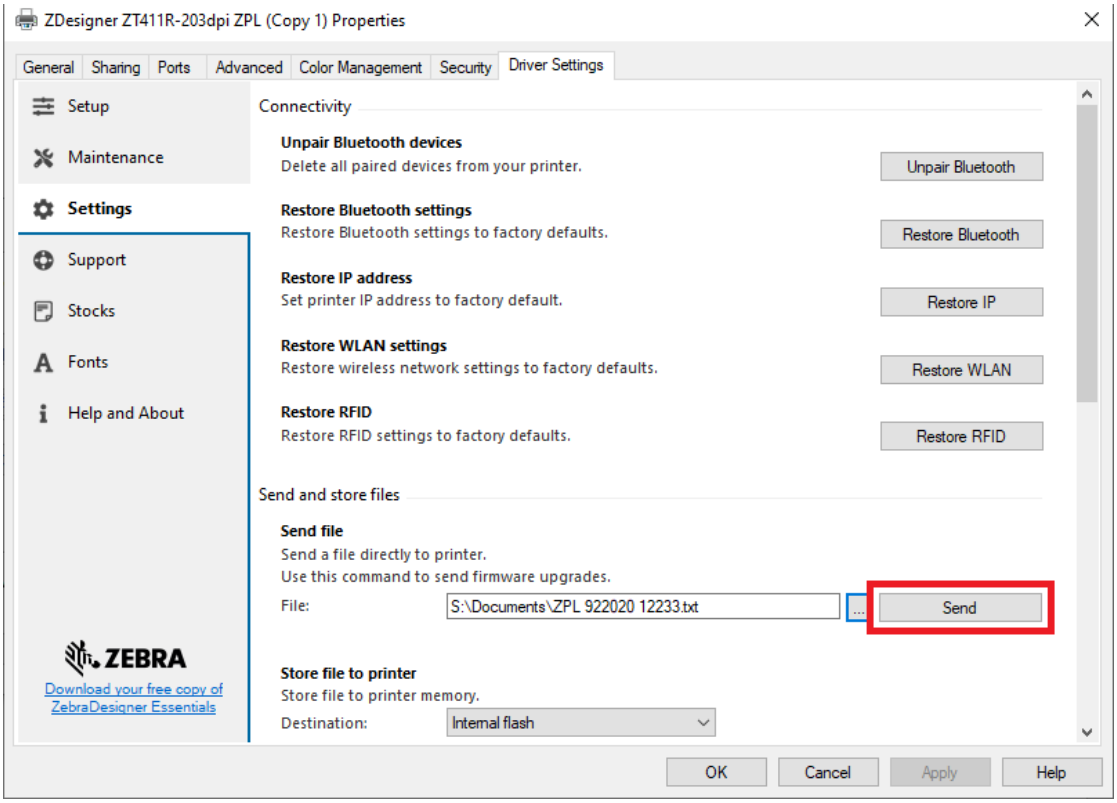

*(Appendix B continuation)*

14.Choose a file

15.Click Open

16.Click Send

17.Printing will start

## Tagging

The process of attaching printed labels to the appropriate asset.

**Procedure**:

1.Get the RFID scanner to check if labels can be read properly

2.Click asset and check if information indicated is correct

3.Locate the asset

4.Check the reference number/model/type/sap/name of the asset if it's the same with the information displayed in the label

5.Attach the label into the right position of the asset

### Locate Tag

This feature allows users to quickly locate an asset tag by selecting the Locate Tag operation.

**Action**: Select "Operation > Locate Tag" from the menus.
